

Transforming ICT

Case Study: Music, Media and iMacs at Highgate Wood

Highgate Wood School has been transformed through new high tech facilities. These facilities are supporting subjects such as music technology, and media studies. Most evident are the new iMacs - bringing the school industry standard facilities.

Already the school is reporting that the quality of work is already enhanced and the attitudes of students and staff have been given a real lift. This has been most noticeable at A'Level.

'Teacher toolkits' featuring interactive whiteboards, projectors, speakers and PCs in every teaching space have also made a real difference.

With teachers beginning to use a wider variety of ICT tools and devices, the school is well on the way to make a real e-transformation.

ICT network enhancements will make even more developments possible. Supporting all this change is a dedicated member of staff in a new post, e-transformation Co-ordinator, at a senior level in the school.

The dramatic improvements in the quality of ICT are enabling Highgate Wood School to offer an increasingly rich curriculum to its students.
