**Subject:** Wood Green Action Plan: Wightman Road

Dear Haringey Planning Department,

I have seen Haringey Council's Area Action Plan for Wood Green dated February 2017 and wish to object in the strongest terms to the assumption, implicit in this plan, that large volumes of road traffic will continue to be routed to Wightman Road and the Haringay ladder.

The Area Action Plan for Wood Green envisages a huge expansion of the commercial activities centred upon Wood Green and this can be expected to draw still more road traffic into Wightman Road which is completely unsuited for it.

Expected population growth in the outer boroughs will in any event lead to increased traffic through our borough. Wightman Road is already dangerous for pedestrians and cyclist because the road is narrow, narrowed still further by car parking on both the road and pavements and no steps are taken by the Council to enforce the 20 mph speed limit which is consequently generally ignored by motorists. The last thing the Haringey planners should be doing is to encourage still more traffic onto Wightman Road.

Let an improved Wood Green remain an essentially local town centre and, if there has to be a new "Metropolitan Town Centre" for North London, let it be out beyond the North Circular Road so that traffic will be drawn away from us in the Ladder.

Wightman Road, like most parts of the borough, like Wood Green, were built before the age of the motor vehicle, and most parts are blighted by excessive road traffic much of which is just passing through and makes no contribution to the locality apart from causing pollution. Will the Council recognise this disagreeable fact and plan accordingly?

Ladder residents do not want plans that prioritise the attraction of new traffic from wide swathes of North London and we don't want the freely flowing traffic from Wood Green roaring passed our windows and causing still more pollution.

Pollution in our streets does not come only from buses and HGV's. It also comes from many thousands of light vehicles, both diesel and petrol, that already pass through here every day.

This is especially true of Pemberton Road, into which much of Wightman Road's passing traffic turns, with the result that the pollution affects not only local residents but also the children attending Pemberton Road's South Haringey School.

Will you please let us have a serious response to the blight of air pollution, including NO<sub>2</sub>, which is already above legal limits in Wightman Road and other streets?

Yours sincerely,  
*Sandy Schofield*
