Appendix P – NETWORK RAIL GUIDANCE FOR LEVEL CROSSINGS.

Guidance on the application of Salt grit to level crossing surfaces and approaches.

Purpose

This guidance document is for distribution to Highway Authorities and their contractors that carry out gritting operations over level crossing surfaces on Network Rail infrastructure. This document has been produced to work towards achieving the best practice for the safety of users of level crossings and the operability and maintenance of the infrastructure.

Gritting and level crossings

To achieve the best possible compromise we request that highway authorities and contractors that have level crossings on their gritting routes do not apply salt based grit from 12 metres to the nearest running rail both sides of the crossing when applying grit that is salt based.

The benefits of this approach are as follows;

- Not applying grit from a distance of 12mtrs to the nearest running rail both sides of the crossing will reduce (although not eliminate) the extent of corrosion and delays associated with track circuit failures.
- The grit carried over by the wheels of motor vehicles applies deposits with comparable effects on skid resistance and sufficient to prevent the icing over of level crossing surface systems without the saturation of the crossing surface system and track bed.

When this action is adopted the local Network Rail Operations Risk Control Co-ordinator should consider the provision of salt bins for pedestrians on an individual crossing basis.

Alternative measures, including alternatives to salt based products and application measures have been considered, out of all methods the one with the most positives and fewest negatives is that above, until alternative de-icer products become more widely applied by the highways authorities as standard for environmental reasons.
