Limitations

AECOM Infrastructure & Environment UK Limited (“AECOM”) has prepared this Report for the use of London Borough of Haringey Council (“the Client”) in accordance with the Agreement under which our services were performed. No other warranty, expressed or implied, is made as to the professional advice included in this Report or any other services provided by AECOM.

The conclusions and recommendations contained in this Report are based upon information provided by others and upon the assumption that all relevant information has been provided by those parties from whom it has been requested and that such information is accurate. Information obtained by AECOM has not been independently verified by AECOM, unless otherwise stated in the Report.

The methodology adopted and the sources of information used by AECOM in providing its services are outlined in this Report. The work described in this Report was undertaken in 2015 and is based on the conditions encountered and the information available during the said period of time. The scope of this Report and the services are accordingly factually limited by these circumstances.

AECOM disclaim any undertaking or obligation to advise any person of any change in any matter affecting the Report, which may come or be brought to AECOM’ attention after the date of the Report.

Certain statements made in the Report that are not historical facts may constitute estimates, projections or other forward-looking statements and even though they are based on reasonable assumptions as of the date of the Report, such forward-looking statements by their nature involve risks and uncertainties that could cause actual results to differ materially from the results predicted. AECOM specifically does not guarantee or warrant any estimate or projections contained in this Report.

INTRODUCTION

1 BACKGROUND

- 1.1.1 AECOM (formally URS) is commissioned by London Borough of Haringey to undertake Sustainability Appraisal (SA) in support of the emerging Development Management (DM) Policies Development Plan Document (DPD). Once adopted, the DPD will set out the detailed DM policies for the Borough; building on the adopted Strategic Policies DPD.
- 1.1.2 SA is a mechanism for considering and communicating the likely effects of a draft plan, and alternatives, in terms of sustainability issues (including 'equalities' and 'health' issues¹), with a view to avoiding and mitigating adverse effects and maximising the positives. SA of DPDs is a legal requirement.²

2 SA EXPLAINED

- 2.1.1 It is a requirement that SA is undertaken in-line with the procedures prescribed by the Environmental Assessment of Plans and Programmes Regulations 2004, which were prepared in order to transpose into national law the EU Strategic Environmental Assessment (SEA) Directive.³
- 2.1.2 In-line with the Regulations, a report (known as **the SA Report**) must be published for consultation alongside the draft plan that essentially 'identifies, describes and evaluates' the likely significant effects of implementing 'the plan, and reasonable alternatives'.⁴ The report must then be taken into account, alongside consultation responses, when finalising the plan.
- 2.1.3 More specifically, the SA Report must answer the following **three questions**:
1. What has Plan-making / SA involved **up to this point**?
 - Including with regards to consideration of 'reasonable alternatives'.
 2. What are the SA findings **at this stage**?
 - i.e. in relation to the draft plan.
 3. What happens **next**?
 - What steps will be taken to finalise the plan?
 - What measures are proposed to monitor plan implementation?
- 2.1.4 **Table 2.1** explains more about the regulatory basis for answering these questions.

2.2 This SA Report

- 2.2.1 This document is the SA Report for the DM Policies DPD, and as such each of the three SA questions is answered in turn below, with a 'part' of the report dedicated to each.
- 2.2.2 Before answering Question 1, however, there is a need to set the scene further within this 'Introduction' by answering two other questions.

¹ As part of this SA process, explicit consideration is being given to 'equalities' and 'health' issues, and as such this SA process can be said to be integrating Equalities Impact Assessment (EqIA) and Health Impact Assessment (HIA). More on the SA scope – i.e. the scope of issues that are a focus of SA – is explained in Chapter 4.

² Since provision was made through the Planning and Compulsory Purchase Act 2004 it has been understood that Local Planning authorities must carry out a process of Sustainability Appraisal alongside plan-making. The centrality of SA to Local Plan-making is emphasised in the National Planning Policy Framework (2012).

³ Directive 2001/42/EC

⁴ Regulation 12(2)

Table 2.1: Questions answered by this SA Report, in-line with Regulatory⁵ requirements

PRIMARY QUESTIONS ANSWERED		IN LINE WITH REGULATIONS... THE SA REPORT MUST INCLUDE...
What has plan-making / SEA involved up to this point? [See Part 1 , below]		<ul style="list-style-type: none"> • Outline reasons for selecting the alternatives dealt with (and thus an explanation of the ‘reasonableness’ of the approach) • The likely significant effects associated with alternatives • Outline reasons for selecting the preferred approach in-light of alternatives assessment / a description of how environmental objectives and considerations are reflected in the draft plan
What are the SEA findings at this current stage? [See Part 2 , below]		<ul style="list-style-type: none"> • The likely significant effects associated with the draft plan • The measures envisaged to prevent, reduce and offset any significant adverse effects of implementing the draft plan
What happens next? [See Part 3 , below]		<ul style="list-style-type: none"> • A description of the monitoring measures envisaged
OTHER QUESTIONS ANSWERED		IN LINE WITH REGULATIONS... THE SA REPORT MUST INCLUDE...
What’s the plan seeking to achieve?		<ul style="list-style-type: none"> • An outline of the contents, main objectives of the plan and relationship with other relevant plans and programmes
What’s the scope of the SEA?	What’s the sustainability ‘context’?	<ul style="list-style-type: none"> • Relevant environmental protection objectives, established at international or national level • Any existing environmental problems which are relevant to the plan including those relating to any areas of a particular environmental importance
	What’s the sustainability ‘baseline’?	<ul style="list-style-type: none"> • Relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan • The environmental characteristics of areas likely to be significantly affected • Any existing environmental problems which are relevant to the plan including those relating to any areas of a particular environmental importance
	What are the key issues and objectives that should be a focus?	<ul style="list-style-type: none"> • Key environmental problems / issues and objectives that should be a focus of (i.e. provide a ‘framework’ for) assessment

N.B. The right-hand column of Table 2.1 does not quote directly from Schedule II of the Regulations. Rather, it reflects a degree of interpretation. This interpretation is explained in **Appendix I** of this report.

Also, **Appendix II** presents supplementary information (in the form of a checklist) to further explain how/where regulatory requirements are met within this report.

⁵ Environmental Assessment of Plans and Programmes Regulations 2004

3 WHAT IS THE PLAN SEEKING TO ACHIEVE?

3.1 Overview

3.1.1 The DM Policies DPD, once adopted will set out the detailed development management policies for the Borough; building on the adopted Strategic Policies DPD. The DM Policies DPD will be used to guide and shape the development that comes forward in the Borough and will provide the decision-making framework that planning applications will be assessed against.

3.1.2 The objectives of the DM Policies DPD are to:

- Direct development to appropriate locations and ensure a balance between land uses and in the case of housing, the types of accommodation that should be provided.
- Set out design requirements and environmental sustainability standards.
- Address the need to mitigate any impacts of development on valuable infrastructure and identify the circumstances in which applicants will be required to provide additional infrastructure. This includes social community facilities such as schools; public realm improvements; energy and utilities infrastructure; open space and a range of other types of infrastructure.

3.1.3 The main influences on plan preparation are the National Planning Policy Framework (NPPF), which sets out a suite of national policies that Local Plans must adhere to; the London Plan (2015), which establishes housing and employment targets for Haringey; and the adopted Strategic Policies DPD (2013). The plan is also being developed in-light of the plans of neighbouring authorities (adopted and emerging). This is important given the 'Duty to Cooperate' established by the Localism Act 2011.

3.2 What's the plan not seeking to achieve?

3.2.1 The plan is not seeking to set an overarching spatial strategy for the Borough as this is set out in the Strategic Policies DPD (2013) and London Plan. The plan instead seeks to build on the strategic policies and add greater detail to guide, shape and inform decision-making for development proposals that will come forward during the plan period.

3.2.2 At the same time, the plan will be somewhat strategic in nature, omitting consideration of some detailed issues in the knowledge that these can be addressed further down the line, i.e. at the planning application stage.

4 WHAT'S THE SCOPE OF THE SA?

4.1 Introduction

- 4.1.1 The aim here is to introduce the reader to the scope of the SA, i.e. the sustainability issues / objectives that should be a focus of (and provide a broad methodological framework for) SA. Further information on the scope of the SA – i.e. a more detailed review of sustainability issues/objectives as highlighted through a review of the sustainability 'context' and 'baseline' - is presented in within **Appendix III**.

Consultation on the scope

- 4.1.2 The Regulations require that: *"When deciding on the scope and level of detail of the information that must be included in the [SA] Report, the responsible authority shall consult the consultation bodies [who] by reason of their specific environmental responsibilities, [they] are likely to be concerned by the environmental effects of implementing plans"*. In England, the consultation bodies are Natural England, the Environment Agency and English Heritage.⁶
- 4.1.3 As such, an SA Scoping Report was published for consultation in 2012.⁷ In addition to consulting the statutory consultees, the consultation was widened to include all those organisations and individuals on the Council's consultation database. Subsequent to consultation the SA scope was updated.

4.2 Key issues / objectives

- 4.2.1 The following table presents the sustainability objectives established through SA scoping, i.e. in-light of context/baseline review and consultation. Taken together, these objectives provide a methodological 'framework' for appraisal.

⁶ In-line with Article 6(3) of the SEA Directive, these consultation bodies were selected because *'by reason of their specific environmental responsibilities, [they] are likely to be concerned by the environmental effects of implementing plans and programmes.'*

⁷ The SA Scoping Report can be viewed online: <http://www.haringey.gov.uk/housing-and-planning/planning/planning-policy/local-development-framework-ldf/development-management-development-plan-document>

Table 4.1: The SA Framework

Topic	SA Objective	Appraisal criteria <i>Will the policy approach under consideration help to...</i>
Social		
Crime	Reduce crime, disorder and the fear of crime	<ul style="list-style-type: none"> • Encourage safety by design? • Reduce levels of crime? • Reduce the fear of crime? • Reduce levels of antisocial behaviour?
Education	Improve levels of educational attainment for all age groups and all sectors of society	<ul style="list-style-type: none"> • Increase levels of participation and attainment in education for all members of society? • Improve the provision of and access to education and training facilities? • Ensure educational facilities are accessible to residential areas? • Enhance education provision in-step with new housing?
Health	Improve physical and mental health for all and reduce health inequalities	<ul style="list-style-type: none"> • Improve access to health and social care services? • Prolong life expectancy and improve well-being? • Promote a network of quality, accessible open spaces? • Promote healthy lifestyles? • Provide good quality outdoor sports facilities and sites?
Housing	Provide greater choice, quality and diversity of housing across all tenures to meet the needs of residents	<ul style="list-style-type: none"> • Reduce homelessness? • Increase the availability of affordable housing? • Improve the condition of Local Authority housing stock? • Improve the diversity of the housing stock? • Promote the efficient reuse of existing housing stock whilst minimising the impact on residential amenity and character? • Create balanced communities of different affordable housing types, densities and tenures? • Create integrated, mixed-use tenure developments?
Community Cohesion	Protect and enhance community spirit and cohesion	<ul style="list-style-type: none"> • Promote a sense of cultural identity, belonging and well-being? • Develop opportunities for community involvement? • Support strong relationships between people from different backgrounds and communities?
Accessibility	Improve access to services and amenities for all groups	<ul style="list-style-type: none"> • Improve access to cultural and leisure facilities? • Maintain and improve access to essential services (banking, health, education) facilities?
Economic		
Economic Growth	Encourage sustainable economic growth and business development across the borough	<ul style="list-style-type: none"> • Retain existing local employment and create local employment opportunities? • Diversify employment opportunities? • Meet the needs of different sectors of the economy? • To facilitate new land and business development?

Topic	SA Objective	Appraisal criteria <i>Will the policy approach under consideration help to...</i>
Skills and Training	Develop the skills and training needed to establish and maintain a healthy labour pool	<ul style="list-style-type: none"> • Improve lifelong learning opportunities and work related training? • Reduce high levels of unemployment and worklessness? • Facilitate development of new and improved training facilities in high unemployment areas?
Economic Inclusion	Encourage economic inclusion	<ul style="list-style-type: none"> • Improve physical accessibility to local and London-wide jobs? • Support flexible working patterns? • Encourage new businesses?
Town Centres	Improve the vitality and vibrancy of town centres	<ul style="list-style-type: none"> • Enhance the environmental quality of the borough's town centres? • Promote the borough's town centres as a place to live, work and visit? • Ensure that the borough's town centres are easily accessible and meet local needs and requirements? • Promote high quality buildings and public realm?
Environmental		
Biodiversity	Protect and enhance biodiversity	<ul style="list-style-type: none"> • Protect and enhance biodiversity at designated and non-designated sites? • Link and enhance habitats and wildlife corridors? • Provide opportunities for people to access wildlife and diverse open green spaces?
Townscape and Cultural Heritage	Protect and enhance the borough's townscape and cultural heritage resources and the wider London townscape	<ul style="list-style-type: none"> • Promote townscape character and quality? • Preserve or enhance buildings and areas of architectural and historic interest?
Open Space	Protect and enhance the borough's landscape resources	<ul style="list-style-type: none"> • Promote a network of quality, accessible open spaces? • Address deficiencies in open space provision?
Water Resources	Protect and enhance the quality of water features and resources	<ul style="list-style-type: none"> • Preserve ground and surface water quality? • Conserve water resources? • Incorporate measures to reduce water consumption?
Soil and Land Quality	Encourage the use of previously developed land	<ul style="list-style-type: none"> • Encourage the development and remediation of brownfield land? • Promote the efficient and effective use of land whilst minimising environmental impacts?
Flood Risk and Climate Change	Mitigate and adapt to climate change	<ul style="list-style-type: none"> • Reduce and manage flood risk from all sources? • Encourage the inclusion of SUDS in new development?
Air Quality	Protect and improve air quality	<ul style="list-style-type: none"> • Manage air quality within the borough? • Encourage businesses to produce travel plans?
Noise	Minimise the impact of the ambient noise environment	<ul style="list-style-type: none"> • Minimise the impact of the ambient noise environment?

Topic	SA Objective	Appraisal criteria <i>Will the policy approach under consideration help to...</i>
Energy and Carbon	Limit climate change by minimising energy use reducing CO2 emissions	<ul style="list-style-type: none"> Minimise the use of energy? Increase energy efficiency and support affordable warmth initiatives? Increase the use of renewable energy? Mitigate against the urban heat island effect? Ensure type and capacity of infrastructure is known for future development?
Waste Management	Ensure the sustainable use of natural resources	<ul style="list-style-type: none"> Reduce the consumption of raw materials (particularly those from finite or unsustainable sources)? Encourage the re-use of goods? Reduce the production of waste? Support the use of sustainable materials and construction methods? Increase the proportion of waste recycling and composting across all sectors?
Sustainable Transport	Promote the use of sustainable modes of transport	<ul style="list-style-type: none"> Improve the amenity and connectivity of walking and cycling routes? Promote the use of public transport? Reduce the use of the private car? Encourage development in growth areas and town centres and reduce commuting?

4.3 A note on ‘equalities’ and ‘health’ considerations

4.3.1 Equality and health considerations were a focus of SA scoping work. As such, it is the case that equalities and health issues are fully reflected in the SA scope, and hence the SA process ‘integrates’ Equalities Impact Assessment (EqIA) and Health Impact Assessment (HIA). **Appendix IV** signposts to areas within this report where EqIA and HIA has ‘fed-in’.

Box 4.1: EqIA and HIA

The Council is not required to undertake **EqIA**, but does have a duty to give "due regard" to promoting equality of opportunity for all protected groups when making policy decisions; and publish information showing how they are complying with this duty. ‘Protected groups’ are those with the following characteristics: age; disability; gender reassignment; marriage and civil partnership; pregnancy and maternity; race; religion or belief; sex; sexual orientation.

With regards to **HIA**, this are no requirements on the Council, although the NPPF requires planners to promote healthy communities and use evidence to assess health and wellbeing needs; and additionally, the GLA and the Mayor are required to ‘have regard to health’ in preparing strategies at the London-scale. It is important to understand that HIA is to a large extent about giving consideration to the wider *determinants of health*, including those related to the quality of the natural and built environment, people’s daily activities and lifestyles, and local communities and the economy.

Determinants of health and wellbeing in our neighbourhoods, from Barton & Grant (2006)

PART 1: WHAT HAS PLAN-MAKING / SA INVOLVED UP TO THIS POINT?

5 INTRODUCTION (TO PART 1)

5.1.1 The 'story' of plan-making / SA up to this point is told within this part of the SA Report. Specifically, this part of the report explains how preparation of the current version of the DM Policies DPD has been informed by appraisal of **alternatives** for the following policy areas / topics:

- Managing housing conversions
- Housing density and design
- Employment sites (1)
- Employment sites (2)
- Town centre uses
- Negative clusters: hot food takeaways and betting shops
- Siting and design of tall buildings
- Views and vistas
- Heritage and conservation
- Car-free or car-capped developments
- Carbon offsetting
- Community infrastructure
- Open space provision

5.1.2 Systematic appraisal of (and consultation on) reasonable alternatives, in relation to these topics, is helpful as it equates to proactive plan-making, and is a means of ensuring that the final policy approach is sufficiently justified.

Reasons for focusing on these policy areas

5.1.3 These are the same key strategic issues that were the focus of alternatives appraisal within the Interim SA Report of February 2015, with the exception that 'Open space provision' has been added to the list.

5.1.4 All of these topics offer an opportunity to explore policy alternatives, with a view to best addressing locally specific issues and contributing to delivery of Haringey's spatial strategy. It is not the case that the preferred policy approach in relation to any of the topics previously examined in February 2015 is now 'set in stone' to such an extent that it is no longer helpful to dwell on alternatives, nor is it the case that any further topics - other than open space provision - have emerged since February 2015 as necessitating alternatives appraisal.⁸ Other policy topics besides those listed above could *potentially* have been the focus of alternatives appraisal, but were not on the basis that it was unclear what value would be added. For many topics it is proportionate to develop a preferred policy approach on the basis of the direction set by higher level policy, technical work and consultation, without formal alternatives appraisal.

⁸ There are several new policy areas that have emerged since February 2015, but it is not thought that any necessitate formal alternatives appraisal. Three of the new policy areas relate to implementation and delivery, specifically: 1) Use of Planning Obligations; 2) Regeneration and Masterplanning; and 3) Supporting Site Assembly. The matter of regeneration and masterplanning / site assembly has been a focus of consultation responses to some extent, in particular responses received by those who would wish to see less of a strategic approach (i.e. more of a piecemeal approach) in some areas of the Borough (in order to maintain existing character); however, given the plan objectives, and need to ensure and demonstrate that the plan is deliverable, it is not clear that there are reasonable alternatives. Two other new policy areas are: 4) Maximising the use of town centre floorspace; and 5) Backland, garden land and infill development; however, these need not be the focus of alternatives appraisal (for the reasons set out in paragraph 5.1.4).

Structure of this part of the SA Report

- 5.1.5 Each of the 13 policy areas listed above is assigned a chapter, below. Within each chapter, the following questions are answered:
- What are the reasons for selecting the alternatives dealt with?
 - What are the appraisal findings (in relation to the set of alternatives in question)?
 - What are the Council's reasons for selecting the preferred approach in-light of alternatives appraisal findings?

- 5.1.6 These questions reflect the regulatory requirement for the SA Report to present 1) appraisal findings for reasonable alternatives and 2) 'an outline of the reasons for selecting the alternatives dealt with'.

Aside from alternatives appraisal, how else has SA influenced plan-making?

- 5.1.7 In addition to alternatives appraisal, development of the draft (pre-submission) plan has also been influenced by appraisal of a working draft version of the plan (specifically, appraisal of the preferred approach as presented within the draft plan consultation document of February 2015). The influence of SA work from that stage is not explained here (in 'Part 1'), but rather is explained in 'Part 2' below, which deals with the appraisal of the current draft plan.

6 HOUSING CONVERSIONS

6.1 Introduction

6.1.1 There is a demand for housing within the borough, including family housing. Conversions have historically made a relatively small but consistent contribution to housing supply however the incremental and cumulative impact of conversions over the years has reduced the availability of family housing, and negatively impacted local amenity in some circumstances.

6.2 Reasons for selecting the alternatives dealt with

6.2.1 The Local Plan is not reliant on housing conversions to meet strategic housing targets and the Council therefore has the flexibility to consider policy options for maintaining access to and availability of family housing. An approach to restrict conversions in certain areas to preserve larger and family homes is therefore proposed. This should be considered against an option of not introducing this restriction.

6.2.2 The following alternatives have been appraised:

Option 1 - Establish a restricted conversion area to preserve larger and family homes

Option 2 - Do not establish a restricted conversion area.

6.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

6.3 Summary appraisal findings

6.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix V**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 6.1: Summary appraisal findings: Housing conversions

Relevant sustainability topics	Option 1	Option 2
Health	=	
Housing		2
Community Cohesion		2
Economic Growth	=	
Soil and Land Quality	2	
Flood Risk and Climate Change	=	
Energy and Carbon	2	
Summary		
<p>A key issue is the need to deliver housing that is designed to meet the requirements of the wider population and provides flexibility and choice. On average, the number of households is expected to increase but reduce in size. There is also expected to be an increase in demand for larger homes for families with two or more children. The conversion of larger homes into smaller flats can contribute to the provision of additional housing and the mix of housing (in areas where there is a monoculture of large houses); however, it can lead to a loss of housing mix in areas where there is a mix of housing types and where there is strong pressure for such conversions and family homes are not protected. The cumulative effect of conversions can also have an adverse impact on the character of existing residential areas in terms of the intensification of use and associated issues. The policy approach under Option 1 would restrict this conversion in particular areas (presumably areas where there is most pressure on the conversion/loss of family homes). This would help retain houses for larger families while still allowing conversions in other areas, helping to sustain and create a mix of housing across the borough and support mixed communities. However it would also restrict smaller dwelling sizes being created. Not setting a conversion restriction (Option 2) may have benefits for efficient use of land and climate change (reduced carbon emissions due to more efficient use of space and improved energy efficiency), but it is unlikely that these effects would be significant.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>		

Reasons for selecting the preferred approach in-light of alternatives appraisal

6.3.2 In order to help support and deliver mixed and balanced communities, including a range of housing options across the borough, an approach to restrict the conversion of family homes is preferred (Option 1). The preferred option will help to address local housing need whilst maintaining and improving local character and amenity. In addition, the preferred option will not inhibit the Council’s ability to meet its strategic housing target. The SA reflects the likely positive effects of this option, particularly on the objective of housing.

7 HOUSING DENSITY AND DESIGN

7.1 Introduction

7.1.1 Haringey's annual strategic housing delivery target is expected to increase from 820 to 1,502 in the London Plan. There is therefore an imperative to maximise the delivery of housing on development sites. However, this delivery needs to be balanced against wider considerations around maintaining and improving local character, amenity and access. There is a need to appropriately situate new housing in the local context.

7.2 Reasons for selecting the alternatives dealt with

7.2.1 The Strategic Policies DPD sets out that new development should comply with the density standards set out in the London Plan. This is a baseline position which should be considered. However, the DM Policies document offers an opportunity to provide more detailed policy and guidance on the application of the London Plan policy, taking account of local technical evidence and individual site circumstances.

7.2.2 The following alternatives have been appraised:

Option 1- Apply London Plan density standards, but allow flexibility in applying these standards, based on local circumstances, to optimise housing delivery

Option 2 - London Plan standards applied with no flexibility for consideration of local or site circumstances.

7.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

7.3 Summary appraisal findings

7.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix VI**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using **red** / **green** shading) and also rank the alternatives in order of preference. Also, ' = ' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 7.1: Summary appraisal findings: Housing density and design

Relevant sustainability topics	Option 1	Option 2
Crime	=	
Education	=	
Health	=	
Housing	★ 1	2
Community Cohesion	★ 1	2
Economic Growth	★ 1	2
Economic Inclusion	★ 1	2
Soil and Land Quality	★ 1	2
Flood Risk and Climate Change	=	
Energy and Carbon	★ 1	2
Sustainable Transport	★ 1	2
<p>Summary</p> <p>Haringey is a densely populated borough (86.2 persons per hectare; well above the London average of 52) and the population is set to increase by 31,234 over the period of 2011 to 2021. This indicates that some high density housing schemes are needed, perhaps going beyond what is recommended in the London Plan. Against this background, Option 1 is seen to perform well in terms of sustainability objectives. As well as benefits in terms housing objectives, targeted high density development in Haringey is supported in terms of ‘sustainable transport’, ‘reducing per capita carbon emissions’ and ‘increasing accessibility to local jobs’. However, there are risks around access to health care and community infrastructure more generally.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>		

7.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

7.4.1 A flexible policy approach to housing density (Option 1), based on the London Plan density matrix, is considered an appropriate means to ensure that development is guided by local and site specific circumstances. Some locations in Haringey may be better suited to higher or lower density development than others. As such, it is not considered that a strict interpretation of the density matrix would be the best option, particularly in the wider view of maximising housing delivery and responding to local character. The SA confirms that a flexible policy approach would likely result in positive effects across a number of sustainability objectives.

8 EMPLOYMENT SITES (1)

8.1 Introduction

8.1.1 The Strategic Policies DPD aims to facilitate a gradual restructuring of the borough's employment land portfolio in order to attract a wider range of businesses, as well as to facilitate inward investment and regeneration. There is also a need to provide more and improved local job opportunities, particularly to meet the borough's employment growth targets, which have risen significantly since the adoption of the Further Alterations to the London Plan. The DM Policies DPD provides an opportunity to set more detailed policy requirements to help meet these objectives.

8.2 Reasons for selecting the alternatives dealt with

8.2.1 B Class employment uses are broadly acceptable in Haringey's employment sites and areas. However, the nature of employment activity is generally dependent on the nature of use within the B Class. Some B Class uses (such as B1 and B2) offer the potential for higher density employment development than others (B8). Given the strategic employment objectives set out above, it is appropriate to consider options which differentiate between the range of acceptable uses within the B Class.

8.2.2 The following alternatives have been appraised:

Option 1 - Requirement to maximise employment densities on sites

Option 2 - Less restrictive approach, with no specific steer for higher employment densities.

8.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

8.3 Summary appraisal findings

8.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix VII**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 8.1: Summary appraisal findings: Employment sites (1)

Relevant sustainability topics	Option 1	Option 2
Crime	=	
Community Cohesion	=	
Economic Growth	★ 1	2
Economic Inclusion	★ 1	2
Soil and Land Quality	★ 1	2
Noise	★ 1	2

Summary

In an area that is constrained in terms of the availability of land for employment development and has high unemployment levels, intensifying the existing offer is an important priority to create more jobs for the growing population and to address historic local unemployment. Against this background, Option 1 is seen to perform well in terms of sustainability objectives, with significant positive effects predicted in terms of economic growth and economic inclusion. A risk is that if/when space for large floorspace uses is needed, there will not be the land available to accommodate these uses, but this is a more minor consideration given the evidence suggesting economic growth locally is considered most likely to come from B1 development.

8.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

8.4.1 The Strategic Policies DPD sets out acceptable uses in identified Strategic Industrial Locations. However there is scope to consider more locally specific approaches to development in employment areas. There is a limited supply of employment land in Haringey and a targeted response is needed to ensure the use of this land is fully maximised, particularly to raise the level of business and employment in the borough. An approach which is more prescriptive about land uses, facilitating site intensification and higher density employment development is therefore preferred. The SA broadly supports this option with positive effects identified across a range of sustainability objectives.

9 EMPLOYMENT SITES (2)

9.1 Introduction

9.1.1 Whilst safeguarding land for employment is important to support and promote economic development, there is significant pressure to accommodate other land uses in the borough, including for housing, and it is also the case that there are viability challenges associated with employment led redevelopment schemes. The Strategic Policies DPD therefore provides some flexibility for land uses in certain employment locations, particularly where there is a need to facilitate site renewal and regeneration.

9.2 Reasons for selecting the alternatives dealt with

9.2.1 It is vital that the borough has a sufficient supply of employment land, and so given the context provided by the Strategic Policies DPD (which provides some flexibility for land uses in certain employment locations) there is a need to consider how best to maximise employment uses on existing employment sites that will be the focus of mixed use redevelopment.

9.2.2 The following alternatives have been appraised:

Option 1 - Allow introduction of non-employment uses (as part of mixed use schemes) in certain designated employment locations, to cross-subsidise and enable new employment development to come forward

Option 2 - Introduction of non-employment uses within designated employment sites, with no further requirement to cross- subsidise new employment development.

9.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

9.3 Summary appraisal findings

9.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix VIII**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, ' = ' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 9.1: Summary appraisal findings: Employment sites (2)

Relevant sustainability topics	Option 1	Option 2
Crime	★1	2
Housing	=	
Community Cohesion	=	
Economic Growth	★1	2
Economic Inclusion	★1	2
Noise	=	
<p><u>Summary</u> Requiring mixed use redevelopment of existing employment sites to cross-subsidise an enhancement of the employment offer on the site (Option 1) will be necessary if both housing and employment growth targets are to be achieved. Office development will often come forward alongside residential development, and it should be the case that the two uses can coincide on a site without any problems, and indeed there can be benefits for local residents.</p>		

9.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

9.4.1 There is a need to ensure that the borough’s employment land is maximised. Fully employment led schemes may be difficult in certain circumstances, given viability considerations. Therefore, an approach which enables the introduction of more viable mixed uses to cross subsidise employment development is preferred. Whilst the SA scores the preferred option positively, it raises concerns over the issues of access to key services and to sustainable transport, as well as amenity. The policy requirements have been nuanced to ensure the approach is limited to specified locations, where a more flexible approach to development is accepted and with high public transport accessibility levels. The policy will also work in conjunction with other DM policies which seek to protect and enhance amenity.

10 TOWN CENTRE USES

10.1 Introduction

10.1.1 The Strategic Policies DPD recognises the important role town centres have in the borough. Beyond being a place where people shop, they are the heart of the communities they serve, providing a location for jobs, services and community facilities. The importance of healthy and vibrant town centres has been highlighted, in particular due to the detrimental effects of vacant shops, changing shopping patterns and increasing need for centres to accommodate a wider range of uses. The DM Policies provide an opportunity to set more detailed policy requirements for the uses within town centres.

10.2 Reasons for selecting the alternatives dealt with

10.2.1 In order to address the issue of town centre vitality and viability, the reasonable alternatives are set to consider a range of thresholds for A1 uses. This includes an option of setting no thresholds for A1, which is a less restrictive approach, as well as setting specific thresholds to ensure a minimum of A1 uses. The policy options consider the extent to which interventions should be made to ensure the health of town centres.

10.2.2 The following alternatives have been appraised:

Option 1 - Set thresholds for percentage of A1 uses in primary and secondary frontages

Option 2 - No thresholds or different (higher/lower) thresholds for A1 uses.

10.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

10.3 Summary appraisal findings

10.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix IX**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 10.1: Summary appraisal findings: Town centre uses

Relevant sustainability topics	Option 1	Option 2
Crime	=	
Community Cohesion	=	
Economic Growth	=	
Economic Inclusion	=	
Town Centres	=	
<p><u>Summary</u></p> <p>The town centres in Haringey act as the focus for local convenience shopping and community facilities. Given this role, they will contribute to the vitality local communities, and also help to reduce car dependency. Protecting retail in town centres (Option 1) could help to sustain strong and vital centres in the long term; but on the other hand there are arguments to suggest that setting thresholds for A1 could constrain the success/vitality of town centres (relative to a more permissive approach, Option 2). If there is greater demand for non-A1 uses than some existing A-class uses, then a restrictive policy would act to constrain the vitality of town centres, with knock-on effects. It is difficult to distinguish between the alternatives, given the changing role of town centres in society. However, it is noted that Haringey has commissioned an evidence base study which in essence says that, given the increasing population in Haringey and the likely increase in disposable income, it is likely that more retailing will be needed in the borough.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>		

10.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

10.4.1 The preferred approach is to introduce a threshold requirement for A1 uses (Option 1). This has been selected in order to ensure that centres retain an element of retail uses, to help ensure their vitality and vibrancy, recognising the need to expand town functions with complementary uses, i.e. recognising current economic realities and changing role of centres. The preferred policy approach has been nuanced in light of the SA in order to permit other uses, and introduce a type of sequential test which identifies a hierarchy of appropriate uses for town centres.

11 NEGATIVE CLUSTERS: HOT FOOD TAKEAWAYS / BETTING SHOPS

11.1 Introduction

11.1.1 Both the London Plan and Strategic Policies DPD set out objectives to address human health and social deprivation. In Haringey, evidence has suggested a correlation between obesity and deprivation, as well as the location of betting shops and deprivation. Nationally there is also evidence suggesting a link between fast food and obesity. The concentration of any service, where not serving a wider specialist niche market, can have a detrimental effect on the town centres and communities, constraining the land and space available for other services. The role of town centres is critical to the borough, in providing a location for jobs, services and community activities. There is therefore the opportunity to set more detailed planning policies to deliver these objectives.

11.2 Reasons for selecting the alternatives dealt with

11.2.1 The location of betting shops and fast food outlets is, to a degree, already controlled by planning policy. There is an opportunity to explore the impacts of refining the baseline policy position by testing an alternative option, which considers more proactive and stringent controls on the management of the placement of fast food and betting shops.

11.2.2 The following alternatives have been appraised:

Option 1 - Proactively restrict negative clusters (e.g. hot food takeaways and betting shops)

Option 2 - No policy - applications assessed against other town centre use policies.

11.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

11.3 Summary appraisal findings

11.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix X**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 11.1: Summary appraisal findings: Hot food takeaways / betting shops

Relevant sustainability topics	Option 1	Option 2
Crime	★1	2
Health	★1	2
Community Cohesion	★1	2
Accessibility	=	
Economic Growth	=	
Economic Inclusion	★1	2
Town Centres	★1	2
Townscape and Cultural Heritage	★1	2
<u>Summary</u>		
Overall, in terms of sustainability objectives, Option 1 is clearly best performing. No draw-backs are highlighted by the appraisal. Restricting negative clusters of hot food takeaways and betting shops would likely lead to significant positive benefits in terms of 'health', given the assumption that there would be reduced consumption of fatty foods. There would also be benefits in terms of reduced crime and antisocial behaviour, improved townscape and improved vitality in town centres.		

11.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

11.4.1 The preferred option is a policy which seeks to proactively manage negative clusters of betting shops and hot food takeaways. This approach will help to deliver the objectives of the Strategic Policies, particularly around improving the health of local residents and addressing deprivation. The preferred option is supported by the SA, which reflects the positive effects across a range of sustainability objectives.

12 TALL BUILDINGS

12.1 Introduction

12.1.1 Tall buildings can contribute to wider strategic objectives for regeneration and economic development, for example, by helping to maximise the use of land, including for new housing. However, tall buildings can have a significant impact on the character and function of local areas and are therefore not appropriate in all locations. The London Plan requires boroughs to identify suitable locations for tall buildings, and to identify these in Development Plan Documents. Haringey's Strategic Policies DPD includes relevant design criteria for tall buildings, however there is an opportunity to set more detailed policies in this regard.

12.2 Reasons for selecting the alternatives dealt with

12.2.1 One approach is to develop a detailed policy for the siting and design of tall buildings, taking account of site specific circumstances and local evidence, such as characterisation studies. This option should be considered against a baseline approach, applying the London Plan and Strategic Policies but without further detailed guidance.

12.2.2 The following alternatives have been appraised:

Option 1 - Detailed policy for the siting and design of tall buildings, within identified locations, taking account of site specific circumstances and supported by Haringey's Urban Characterisation study

Option 2 - Less prescriptive constraints on tall buildings; relying on London Plan and Strategic Policies DPD.

12.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

12.3 Summary appraisal findings

12.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XI**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 12.1: Summary appraisal findings: Tall buildings

Relevant sustainability topics	Option 1	Option 2
Housing	2	★1
Accessibility	=	
Economic Growth	=	
Town Centres	★1	2
Townscape and Cultural Heritage	★1	2
Soil and Land Quality	=	
Energy and Carbon	=	
<p><u>Summary</u></p> <p>Option 1 is best performing in terms of all objectives, other than those relating to ‘housing’. Option 1 would restrict tall buildings to particular areas, protecting the borough’s townscape and cultural heritage, while still allowing tall buildings in some areas.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>		

12.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

- 12.4.1 The preferred option is to develop a more detailed DM policy covering the siting and design of tall buildings, which draws on current tall building guidance. This policy will provide that proposals for tall buildings take better account of local and site specific circumstances, and ensure that such development is appropriately located within the borough, having regard to local character and transport accessibility, along with other considerations.
- 12.4.2 One matter raised in the SA is that the approach may restrict the future supply of housing. The DM Policies DPD has been prepared in view of the relevant emerging site allocations focused DPDs, and these have considered and demonstrated the borough’s ability to deliver its strategic housing targets.

13 VIEWS AND VISTAS

13.1 Introduction

13.1.1 The Strategic Policies DPD seeks to protect and manage identified regionally strategic views. There are, however, other specific key views and vistas within the borough that allow a glimpse of important buildings and other features of the urban landscapes. These contribute to local sense of place as well as providing landmarks and a means of wayfinding. Local views and vistas could benefit from additional policy protection, however a balance must be struck to ensure that opportunities for future development are not constrained.

13.2 Reasons for selecting the alternatives dealt with

13.2.1 One option is a policy to minimise disturbance to identified local views and vistas, recognising the role that these can play in contributing to local character. This option is set against a baseline option of protecting only London Plan strategic views, which is a less restrictive policy position by comparison.

13.2.2 The following alternatives have been appraised:

Option 1 - Policy to minimise disturbance of identified local views and vistas

Option 2 - Only protect London Plan strategic views.

13.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

13.3 Summary appraisal findings

13.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XII**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 13.1: Summary appraisal findings: Views and vistas

Relevant sustainability topics	Option 1	Option 2
Housing	2	★1
Town Centres	★1	2
Townscape and Cultural Heritage	★1	2
<p><u>Summary</u> A policy to minimise disturbance to identified local views and vistas in addition to London Plan strategic views (Option 1) will better protect the borough’s townscape and cultural heritage resources, as compared to only protecting London Plan strategic views (Option 2). Significant positive effects are predicted in terms of townscape/heritage objectives. However, greater protection of identified local views in addition to Local Plan strategic views could place constraints on housing delivery in some areas.</p>		

13.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

- 13.4.1 The preferred option is for a DM policy which provides stronger protection for identified local views and vistas. The option has particular benefits for sustainability objectives on townscape and cultural heritage.
- 13.4.2 The SA has identified that this option might have the effect of constraining opportunities for the delivery of housing, for example, with taller buildings. The DM Policies DPD has been prepared in view of the relevant Site Allocations DPD, and these have considered and demonstrated the borough’s ability to deliver its strategic housing targets.

14 HERITAGE AND CONSERVATION

14.1 Introduction

14.1.1 The historic environment makes an important contribution to local character and residents' sense of place. The Strategic Policies DPD therefore broadly aims to maintain and enhance Haringey's historic environment. National planning policy provides that the Council should protect heritage assets in relation to their significance. Therefore, there is scope for the DM Policies DPD to consider the level of policy weight given to particular heritage assets, and how protection of the historic environment should be positively promoted.

14.2 Reasons for selecting the alternatives dealt with

14.2.1 Haringey has a wide range of heritage assets including designated, statutory listed assets and other non-designated assets. As the Council has a duty to protect statutory listed assets, this baseline option needs to be taken forward. However, an option promoting stronger protection for non-designated assets is also considered, recognising the value these have to local character. Further, for positively promoting the historic environment, an approach favouring adaptive re-use of all heritage assets is set against the baseline policy position.

14.2.2 The following alternatives have been appraised:

Option 1 - Proactive approach to designated and non-designated assets, with applicants required to demonstrate options for adaptive re-use

Option 2 - Do not apply policy to non-designated heritage assets.

14.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

14.3 Summary appraisal findings

14.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XIII**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, ' = ' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 14.1: Summary appraisal findings: Heritage and conservation

Relevant sustainability topics	Option 1	Option 2
Health	=	
Housing	2	★1
Economic Growth	2	★1
Townscape and Cultural Heritage	★1	2
<p>Summary A policy focus on non-designated assets in addition to designated assets (Option 1) is likely to result in significant positive effects in terms townscape and cultural heritage objectives, and it is not clear that there are any major draw-backs to this approach. There might be some negative implications for housing and economic growth, but (thinking long-term) heritage assets can help enable regeneration and create a sense of place (with positive implications for economy and community objectives).</p>		

14.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

14.4.1 The approach to provide protection for both designated and non-designated assets (Option 1) is preferred, given the Strategic Policies overarching position to maintain and enhance Haringey’s historic environment. The Local Plan needs to help facilitate new development. It is recognised that an overly restrictive policy approach on the historic environment, including non-designated heritage assets, might prohibit new development from coming forward. However the SA has indicated the effect is likely to be limited if the preferred option is implemented, and when considered against the significant effects on objectives for townscape and cultural heritage, the approach is sufficiently justified from a sustainability perspective.

15 CAR FREE OR CAR CAPPED DEVELOPMENTS

15.1 Introduction

15.1.1 The Strategic Policies DPD aims to promote sustainable transport options across the borough, recognising in particular the social and environmental benefits involved. The DM Policies DPD will set detailed policy requirements for new development and provides an opportunity to consider how local parking standards may contribute to delivering on the strategic transport objectives.

15.2 Reasons for selecting the alternatives dealt with

15.2.1 The Council aims to maximise the use of sustainable transport options and to reduce car dependency. The London Plan sets out car parking standards which seek to restrain car use and reduce congestion, particularly to improve local accessibility. The London Plan standards provide a baseline position that should be appraised. However, recognising that some areas of the borough are well connected to public transport with high levels of accessibility, along with controlled parking measures, it is reasonable to consider a locally specific approach which allows for car free or car capped development in these locations.

15.2.2 The following alternatives have been appraised:

Option 1 - Limited or no on-site parking where there is good public transport accessibility and a Controlled Parking Zone is in place or planned

Option 2 - Parking required, in accordance with the London Plan parking standards.

15.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

15.3 Summary appraisal findings

15.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XIV**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 15.1: Summary appraisal findings: Car free or car capped developments

Relevant sustainability topics	Option 1	Option 2
Health	★1	2
Accessibility	=	
Air Quality	★1	2
Energy and Carbon	★1	2
Sustainable Transport	★1	2
<p><u>Summary</u> Option 1 (limited or no on-site parking where there is good public transport accessibility and a Controlled Parking Zone in place or planned) is likely to have greater positive effects in terms of encouraging sustainable transport (significant positive effect), health, air quality and climate change mitigation objectives. With large scale development planned within Haringey, an integrated approach to land use and transport planning that minimises the need to travel and encourages the most sustainable travel choices could have a notable positive effect on reducing transport-related greenhouse gas emissions per capita.</p>		

15.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

15.4.1 The preferred option is one which provides the flexibility for car free or car capped parking (Option 1). The SA reflects that both policy options score positively on sustainability objectives, however there are notable significant positive effects with the preferred option, Further, the preferred option will support delivery of the Strategic Policies, enabling a more flexible approach to promoting sustainable transport options, where local and site specific circumstances allow, reducing car dependency whilst positively impacting on the environment.

16 CARBON OFFSETTING

16.1 Introduction

16.1.1 The Strategic Policies DPD sets out a range of policies on climate change adaptation and mitigation, including requirements to reduce energy use and facilitate low and zero carbon development. The DM Policies DPD provides an opportunity to set further detailed policies and guidance which can help to ensure that new development is designed and constructed in a sustainable way.

16.2 Reasons for selecting the alternatives dealt with

16.2.1 The Strategic Policies require that carbon reduction targets on new development must be achieved on-site. The London Plan currently provides that London Boroughs can introduce carbon offsetting arrangements in order to achieve carbon reduction targets. An alternative option is therefore to introduce a more flexible local policy requirement to facilitate carbon offsetting, subject to national planning policy and legislation.

16.2.2 In light of this discussion, the following alternatives have been appraised:

Option 1 - Carbon offsetting fund to better enable developers to meet carbon targets

Option 2 - No carbon offsetting (CO₂ reductions must be met on site)

16.2.3 The reasonable alternatives are slightly modified since February 2015. Specifically, reference to 'allowable solutions' has been removed from Option 1.⁹

16.3 Summary appraisal findings

16.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XV**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

⁹ The Council had previously proposed an 'Allowable Solutions' DM policy (which included carbon offsetting as one of several potential options for developers to deliver carbon reductions requirements); however since the publication of the Council's Regulation 18 stage consultation document, the Government has indicated it does not intend to progress with the national Allowable Solutions framework. The draft approach has therefore been amended to focus only on carbon offsetting, in line with regional policy.

Table 16.1: Summary appraisal findings: Carbon offsetting

Relevant sustainability topics	Option 1	Option 2
Health	★ 1	2
Housing	★ 1	2
Air Quality	★ 1	2
Energy and Carbon	★ 1	2
<p><u>Summary</u> A local carbon offsetting fund (Option 1) could be used to fund local energy solutions such as energy efficient retrofit of local authority housing and decentralised energy development, improving the condition and quality of local authority housing. The impact on housing could be significant if sufficient funds were captured through this mechanism, however national government may rule out such an approach in favour of a national offsetting scheme. Given that housing quality/condition and issues around fuel poverty are important determinants of health, Option 1 could also improve health outcomes and reduce health inequalities. N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>		

16.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

16.4.1 The preferred option is to set a local requirement to enable carbon offsetting (Option 1), as this will provide a more flexible approach for developers to meet the policy requirements, taking account of local and site specific circumstances, and viability considerations. The SA highlights the positive effects resulting from carbon offsetting, including financial contributions ringfenced into a local fund to support local projects, where the impacts of new development will be experienced. The preferred approach will need to be reviewed and considered subject to any relevant Government policy or regulations coming into force.

17 COMMUNITY INFRASTRUCTURE

17.1 Introduction

17.1.1 Community infrastructure is integral to the creation of balanced and sustainable communities, promoting social interaction and enhancing the quality of life within local neighbourhoods. Planning for community infrastructure is a key challenge and the Local Plan seeks to ensure the needs of Haringey's existing and future population are met.

17.2 Reasons for selecting the alternatives dealt with

17.2.1 Given the likely sustained demand for community infrastructure in the borough, it is reasonable to consider a policy option which broadly supports proposals for new or extended facilities, irrespective of their location. This should be considered against an option which is more prescriptive, setting location specific requirements for development, particularly in view of the spatial strategy growth areas and identified areas of infrastructure need.

17.2.2 The following alternatives have been appraised:

Option 1 - Policy to set location requirements for new / extended community facilities

Option 2 - No specific location requirements - accept facilities wherever proposed.

17.2.3 These alternatives were previously a focus of appraisal and consultation in February 2015.

17.3 Summary appraisal findings

17.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XVI**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

N.B. Appraisal findings are largely unchanged from the February 2015 Interim SA Report.

Table 17.1: Summary appraisal findings: Community infrastructure

Relevant sustainability topics	Option 1	Option 2
Crime	★1	2
Education	★1	2
Health	★1	2
Community Cohesion	★1	2
Accessibility	★1	2
Skills and Training	★1	2
Economic Inclusion	★1	2
Open Space	=	
Sustainable Transport	★1	2

Summary

Community Infrastructure assets can help to enable regeneration and create a sense of place and improve people’s quality of life. Haringey has existing pockets of deprivation and also areas of deficiency for different types of community infrastructure, as well as new growth in the pipeline that will need supporting infrastructure. Therefore, by locating new and enhanced infrastructure in specific locations, Option 1 is more likely to benefit existing and future residents than Option 2 which could take place anywhere in the borough. No draw-backs to Option 1 have been identified.

N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.

17.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

17.4.1 The SA has highlighted the significant positive effects of a policy that sets location requirements for community infrastructure (Option 1). The option is preferred as it is more likely to support the creation of sustainable communities through an integrated and plan-led process, rather than an ad-hoc basis. This will help to ensure that infrastructure is situated in areas of growth, where need is identified and in highly accessible locations. Further considerations for infrastructure may be covered by the Site Allocations DPD, however the DM DPD will complement any such policies.

18 OPEN SPACE PROVISION

18.1 Introduction

18.1.1 Haringey's Strategic Policies Local Plan seeks to protect and enhance the borough's designated open spaces, as well as improve the quality of and access to this provision. Recognising the limited opportunities for new open space provision within the Borough, it is vital that existing open spaces are protected and enhanced, particularly in areas of identified deficiency.

18.2 Reasons for selecting the alternatives dealt with

18.2.1 It is imperative that new developments both maximise the contribution sites make to meeting growth targets and, wherever possible, improve the overall provision of open space. Regulation 18 consultation responses suggested that the Council should apply a more flexible policy approach which allows for the reconfiguration of open space, as this may help developments address site specific constraints in meeting the above noted objectives. The Council considers there is merit in considering this approach against the baseline position of protecting open spaces in their current configuration. Both options are premised on a policy for no net loss of open space.

18.2.2 The following alternatives have been appraised:

Option 1 - Policy to allow for the reconfiguration of open space on site development proposals, where there would be no net loss of open space provision

Option 2 - Do not allow for reconfiguration of open space (maintain existing configuration).

18.3 Summary appraisal findings

18.3.1 The table below presents summary appraisal findings. Detailed appraisal findings can be found within **Appendix XVII**. The methodology is explained in detail in the appendix, but in summary: Within each row (i.e. for each sustainable topic) the columns to the right hand side seek to both categorise the performance of each scenario in terms of 'significant effects (using red / green shading) and also rank the alternatives in order of preference. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

Table 18.1: Summary appraisal findings: Open space provision

Relevant sustainability topics	Option 1	Option 2
Crime	★1	2
Health	★1	2
Housing	★1	2
Community Cohesion	★1	2
Biodiversity	★1	2
Townscape and Cultural Heritage	2	★1
Open Space	★1	2
Sustainable Transport	★1	2

Summary

Allowing the reconfiguration of open space should enable targeted improvements to be made to the open space resource in those parts of the borough where there are currently deficiencies. It is likely that the quality of open space, in terms of its potential to support recreational activity and other typical open space uses, will improve. This has positive implications in terms of a range of objectives, with significant positive effects predicted in terms of ‘health’. It is also the case that targeted enhancements should enable biodiversity (Green Grid) opportunities to be realised, to a significant extent. A policy of enabling reconfiguration does, however, lead to some risks in terms of ‘Townscape and Cultural Heritage’ given that reconfiguration might well involve a change to the existing character of the open space. More generally, there is the possibility that reconfiguration of numerous open spaces could have unforeseen effects in the long term, and so monitoring will be important.

18.4 Reasons for selecting the preferred approach in-light of alternatives appraisal

18.4.1 The preferred approach supports the spatial strategy in seeking to deliver sustainable development through the provision of high quality, well designed and accessible open spaces. Given the limited opportunities for significant increases in the quantum of open space across the Borough, there is a need to maximise the value of existing open space. Reconfiguration can be an effective approach to addressing identified deficiencies, overcoming functional issues as part of re-provision and may provide windfall opportunities as part of the Borough’s Green Grid. It also provides sufficient flexibility for proposals to overcome site specific constraints to deliver not only improved open space provision, but also other requirements needed to support the spatial strategy.

PART 2: WHAT ARE THE SA FINDINGS AT THIS STAGE?

19 INTRODUCTION (TO PART 2)

19.1.1 This part of the report presents an appraisal of the DM Policies DPD as it currently stands, i.e. as presented within the current ‘pre-submission’ document.

20 APPRAISAL OF THE DRAFT PLAN

20.1.1 This section first presents the appraisal methodology, before going on to present the appraisal of the draft plan under 21 ‘SA framework’ headings. Finally, this section presents appraisal conclusions at the current stage.

20.2 Methodology

20.2.1 The appraisal identifies and evaluates ‘likely significant effects’ of the preferred approach – i.e. the proposed Partial Review - on the baseline, drawing on the sustainability topics and objectives identified through scoping as a methodological framework. To reiterate, the sustainability topics considered in turn below are as follows:

- Crime
- Education
- Health
- Housing
- Community cohesion
- Accessibility
- Economic growth
- Skills and training
- Economic inclusion
- Town centres
- Biodiversity
- Townscape and cultural heritage
- Open space
- Water resources
- Soil and land quality
- Flood risk and climate change
- Air quality
- Noise
- Energy and carbon
- Waste management
- Sustainable transport

20.2.2 Every effort is made to predict effects accurately; however, this is inherently challenging given the high level nature of the policy approaches under consideration, and limited understanding of the baseline. Given uncertainties there is inevitably a need to make assumptions, e.g. in relation to plan implementation and aspects of the baseline that might be impacted.

20.2.3 Assumptions are made cautiously, and explained within the text. The aim is to strike a balance between comprehensiveness and conciseness/accessibility to the non-specialist. In many instances, given reasonable assumptions, it is not possible to predict significant effects, but it is possible to comment on merits (or otherwise) of the draft plan in more general terms.

20.2.4 It is important to note that effects are predicted taking into account the criteria presented within Schedule 1 of the SEA Regulations.¹⁰ So, for example, account is taken of the probability, duration, frequency and reversibility of effects as far as possible. Cumulative effects are also considered, i.e. the potential for the draft plan to impact an aspect of the baseline when implemented alongside other plans, programmes and projects. These effect ‘characteristics’ are described within the appraisal as appropriate.

20.3 Crime

20.3.1 **DM 01** (Delivering High Quality Design) establishes that any new development proposal should be designed to make a positive contribution to a place. High quality design can help contribute to the reduction in crime levels as well as the fear of crime. Further benefits will result from **DM 02** (Accessible and Safe Environments), which requires development proposals to secure inclusive environments that can be used safely.

¹⁰ Environmental Assessment of Plans and Programmes Regulations 2004

- 20.3.2 **DM 09** (Management of the Historic Environment) promotes the adaptive reuse and enabling development of heritage assets, encouraging redevelopment of buildings that may not otherwise be developed due to their sensitivity. This positive policy approach should reduce the number of vacant, derelict or dilapidated buildings in the borough and therefore reduce the potential for crime and anti-social behaviour. Furthermore **DM 42** (Primary and Secondary Frontages) respond to the issue of vacant units in making provision for meanwhile uses.
- 20.3.3 Other policies that could have implications for crime include:
- **DM 08** (Shopfronts, Signs and On Street Dining) requires shopfronts to contribute to a safe and attractive environment
 - **DM 03** (Public Realm) requires advertisements to contribute to a safe and attractive environment.
- 20.3.4 In **conclusion**, the proposed approach to DM policy should have the effect of reducing levels of crime in Haringey. It has a focus on adaptive re-use and developing vacant and derelict buildings (including historic buildings), and policies also seek to use positive design in order to 'design-out' crime and reduce the fear of crime. However, it is not clear that significant effects will result, given the wider determinants of crime.

20.4 Education

- 20.4.1 The approach set out in **DM 48** (Use of Planning Obligations) and **DM 40** (Loss of Employment Land and Floorspace) establishes that planning contributions will be sought to facilitate opportunities for local employment training, including apprenticeships and work experience placements, in line with Policy SP9. This helps ensure that education after school age is still available for the local population.
- 20.4.2 **DM 49** (Managing the Provision and Quality of Community Infrastructure) seeks to protect existing community infrastructure and ensure that new development delivers the required supporting infrastructure and also additional infrastructure in suitable locations, delivering identified infrastructure listed in the Infrastructure Delivery Plan (IDP). These two policies seek to protect existing infrastructure (including education facilities) and, where necessary, extend or enhance existing infrastructure or provide new facilities.
- 20.4.3 In **conclusion**, the proposed policies around education infrastructure seek to increase the quantity, quality and accessibility of provision in the borough, enhancing existing infrastructure and delivering new infrastructure where necessary in order to support growth. It is, however, not possible to conclude significant positive effects given the role played by the IDP.

20.5 Health

- 20.5.1 **DM 02** (Accessible and Safe Environments) and **DM 03** (Public Realm) require all developments to secure healthy environments to help promote healthy lifestyles and in the long term prolong life expectancy and improve well-being. A means of achieving this is through the creation of good quality accessible open space that also provides outdoor sports facilities.
- 20.5.2 **DM 20** (Open Space and Green Grid) seeks to ensure that open space is protected from inappropriate development and positively responds to the need to increase the quality of, and accessibility to, the Borough's network of green and open spaces. It also sets requirements for larger sites in Areas of Open Space Deficiency, setting out how they should provide new open space or improve existing open space. This should encourage exercise and recreation for existing and future residents. The Council also promotes the provision of leisure facilities on these open space areas so to promote healthy lifestyles while using these areas.

- 20.5.3 **DM 23** (Environmental Protection) focuses on protecting the environment from the adverse effects of human activities, as well as seeking to ensure that building occupants and other people in the Borough are not adversely impacted by new development. Through the mitigation of negative effects on air quality during construction and the lifetime of developments, the health of nearby residents should be protected. Furthermore this policy recommends that new development will only be permitted where it is demonstrated that any risks associated with land contamination, including to human health, is addressed beforehand.
- 20.5.4 **DM 47** (Hot Food Takeaways) strongly supports the restriction of hot food takeaway shops 400m from primary and secondary schools and the granting of planning permission for hot food take-away shops outside this exclusion zone has strong requirements that it must meet. This should help to address obesity for residents in Haringey, particularly for children attending secondary school.
- 20.5.5 **DM 31** (Sustainable Transport) promotes active travel (cycling and walking) which should help encourage healthy lifestyles; and also promotes improved public transport which is likely to lead to minor improvements in air quality through displacing car users, reducing emissions and pollution from road transport.
- 20.5.6 Other policies that could have implications for health include:
- **DM 19** (Nature Conservation) seeks to protect and enhance the nature conservation value of designated sites, including those which are publicly accessible
 - **DM 20** (Open Space and Green Grid) promotes a network of open spaces through the London Green Grid
 - **DM 47** (Betting shops) seeks to address the health impacts of negative clustering of uses
 - **DM 58** (Managing the Provision and Quality of Community Infrastructure) states the Council will resist the loss of existing social and community facilities.
- 20.5.7 In **conclusion**, the proposed policy approach focuses on improving the health and wellbeing of the local residents through increasing access to and quality of open space; restricting the locations in which hot food takeaways and betting shops can operate; and encouraging active travel and sustainable transport. The DM Policies DPD should result in **significant positive effects** on the health of local residents.

20.6 Housing

- 20.6.1 **DM 01** (Delivering High Quality Design) and **DM 12** (Housing Design and Quality) underline how all new development needs to be built to a high quality using sustainable design and construction techniques. The creation of balanced communities is supported in **DM 11** (Housing Mix) through the provision of housing developments providing a mix of tenure type for housing across the Borough, particularly to address areas that have imbalances in provision, such as affordable rented housing dominating or where affordable rented housing is under represented.
- 20.6.2 **DM 10** (Housing Supply) sets out the housing delivery aims for the London Borough of Haringey, which expects the maximum appropriate contribution of housing on all sites across all tenures and loss of existing housing only when the housing is replaced with at least equivalent floorspace. **DM 11** (Housing Mix) provides flexibility in the application of the London Plan density matrix, and should help meet a good portion of the markets needs while still being of high quality.

- 20.6.3 Affordable housing levels will be increased through **DM 13** (Affordable Housing), which in line with SP2 of the Strategic Policies, sets the target tenure mix for affordable housing on new development sites, having regard to from viability assessments for each proposal. Furthermore with the ‘tenure blind’ approach set out in DM 12 (Housing Design and Quality) houses will be better integrated with each other. The current Local Authority housing stock is encouraged to be improved upon through **DM 21** (Sustainable Design, Layout and Construction) with the promotion of sustainable retrofitting. Such improvements can make a vast difference in providing better quality housing for the residents.
- 20.6.4 **DM 15** (Specialist Housing) focuses on the provision of specialist housing, which includes sheltered housing and care homes, housing for older people, student accommodation and hostel accommodation. There is a growing demand for older people’s housing as people are living for longer and remaining economically active for longer, and older people’s housing can help older people to retain independence and to ensure that older people are not isolated or detached from their communities. Bespoke specialist housing has the potential to deliver more appropriate housing for those that need it, whilst freeing up/preventing the loss of housing stock for families.
- 20.6.5 Loss of larger and family housing to Houses in Multiple Occupation (HMOs) or smaller self-contained homes is a key issue in Haringey. **DM 17** (Houses in Multiple Occupation) seeks to restrict the conversion of housing into HMOs so that Haringey can maintain a stock of larger homes in the priority areas for families, and to reduce the risk of the larger housing stock from being completely converted. **DM 16** (Residential Conversions) seeks to restrict conversions in specified areas of the Borough. The policies do not completely restrict HMOs and housing conversions altogether but do strengthen the requirements so that HMOs and conversions that do come forward are higher quality and in more accessible locations. Maintaining diversity in the housing stock will lead to secondary benefits in terms of diversity in the community.
- 20.6.6 Other policies that could have implications for housing include:
- DM 01 (Delivering High Quality Design) through promoting environments that are well designed and sensitive to the local context
 - DM 06 (Building Heights)
 - DM 11 (Housing Mix) through promoting a mix of housing types, density and tenure
 - DM 14 (Self-build and Custom Build Housing) seeks to support this type of housing
 - DM 18 (Basement development and lightwells)
 - DM 51 (Warehouse living) will only be allowed in locations where they are supported by site-specific allocations.
- 20.6.7 In **conclusion**, the proposed policies focus on ensuring that Haringey maintains a mix of housing in order to meet housing needs, that new development is mixed in tenure, allowing for regeneration, renewal and refurbishment of the existing dwelling stock where necessary. As such, the DM Policies DPD should lead to **significant positive effects**. Furthermore, flexibility over higher housing densities will be permitted (subject to criteria) which will assist Haringey in meeting its housing targets in a highly built-up borough.

20.7 Community cohesion

- 20.7.1 The policies with perhaps the greatest bearing on community cohesion are those that deal with community infrastructure. **DM 49** (Managing the Provision and Quality of Community Infrastructure) seeks to protect existing community infrastructure and to ensure that new development delivers the required supporting infrastructure and also additional infrastructure in suitable locations, delivering identified infrastructure listed in the Infrastructure Delivery Plan. The policy seeks to protect existing infrastructure and, where necessary, extend or enhance existing infrastructure or provide new facilities. This should lead to benefits in terms of increasing accessibility to community infrastructure and encouraging social cohesion and fostering social capital.
- 20.7.2 The way buildings are placed and how they interact with each other can play a major role in the community cohesion of an area. High quality design can create environments that promote a sense of cultural identity and bring people together. **DM 01** (Delivering High Quality Design) encourages this through requiring new development to demonstrate how they relate positively to neighbouring structures to create a harmonious whole and how they will make a positive contribution to a place. Furthermore, **DM 02** (Accessible and Safe Environments) seeks to create inclusive environments that do not discriminate against people regardless of their ethnicity, gender, age, disability, childcare responsibilities or economic circumstances. The inclusive design requirements should lead to benefits in terms of supporting strong relationships between people from different backgrounds and communities.
- 20.7.3 Local distinctiveness can be enhanced in new developments through high quality public realm, including public art, as set out in **DM 03** (Public Realm). This has the potential to create a sense of cultural identity and brings more uniqueness to the area of Haringey.
- 20.7.4 **DM 11** (Housing Mix) seeks to create a more balanced mix of tenure in housing areas, which will result in strong relationships between people from different backgrounds and communities. This will create more community cohesion that is greatly beneficial for the area especially with the Tottenham riots that highlight a need for this.
- 20.7.5 Other policies that could have implications for community cohesion include: **DM 12** (Housing Design and Quality), which calls for a 'tenure blind' approach to mixed tenure residential development proposals to ensure homes across tenures are indistinguishable.
- 20.7.6 In **conclusion**, the proposed approach to addressing community infrastructure through the DM Policies DPD seeks to increase quantity, quality and accessibility in relation to community infrastructure, enhancing existing infrastructure and delivering new infrastructure where necessary. The policies should therefore lead to **significant positive effects** in terms of access to community infrastructure and other community related objectives. Furthermore, cultural identity, belonging and well-being will be promoted through public art schemes, and higher quality in design supporting a more harmonious public realm. More generally, strong relationships between people from different backgrounds and communities are encouraged through efforts to ensure inclusive environments that do not discriminate against anyone and through the promotion of a mix of tenure housing. The Tottenham riots of 2011 highlight the need of greater community cohesion in the borough.

20.8 Accessibility

- 20.8.1 The improvement of accessibility to facilities is promoted through **DM 02** (Accessible and Safe Environments) through requiring development to be used safely with easy accessibility for all members of the community. This will assist in reducing inequalities in accessibility for disabled people, parents with small children and those with limited mobility. The improvement of access to open space and other leisure facilities is sought for in **DM 20** (Open Space and Green Grid) through the requirement of new developments to improve upon or create new open space and to contribute to enhancing the network of green and open spaces.

- 20.8.2 **DM 31** (Sustainable Transport) focuses on the promotion of sustainable transport, especially where development will lead to high trip generation rates. This focuses on the protection, improvement and creation of pedestrian and cycle routes. This would not only improve transport links for the borough, it would also likely decrease CO₂ emissions and pollution emitted and lead to positive health effects.
- 20.8.3 Proposals for new and extended social and community facilities are required to be located where they are accessible by public transport, walking and cycling, according to **DM 49** (Managing the Provision and Quality of Community Infrastructure). This should ensure good access to essential services and facilities, and help provide access for all people across a number of transport modes. The policy also seeks to protect against the loss of social and community infrastructure.
- 20.8.4 Other policies that could have implications for accessibility include:
- DM 01 (Delivering High Quality Design)
 - DM 03 (Public Realm)
 - DM 41 (New Town Centre Development) seeks to sustain and enhance Haringey's established town centre hierarchy in order to ensure services and facilities are focussed around highly accessible locations
 - DM 54 (Facilitating Telecommunications Development) seeks to enable residents and businesses to fully benefit from modern telecommunications, including online access to services.
- 20.8.5 In **conclusion**, steps are set to be taken to improve the accessibility of the key services and facilities in Haringey; and there is support for sustainable transport, especially for developments that have high trip generation rates. Notably, key services will be required to locate in areas easily accessible by public transport, and new leisure facilities are required to be easily accessible by all members of the community. It is understood that additional work around delivery of community infrastructure will be progressed in line with the updated Infrastructure Delivery Plan (IDP); and on that basis significant positive effects are not predicted.
- 20.9 Economic growth**
- 20.9.1 **DM 40** (Loss of Employment Land and Floorspace) seeks to maintain existing employment land provision, including non-allocated employment land. This should help facilitate economic growth by safeguarding sites for economic and employment purposes.
- 20.9.2 **DM 37** (Maximising the Use of Employment Land and Floorspace) seeks to maximise the use of employment land within the borough through a gradual restructuring of the borough's employment land portfolio. This is to enable the modernisation of old stock where this is no longer suited to current needs, to attract a wider range of businesses to the borough, and to regenerate employment land in highly accessible areas. Improving employment sites and increasing job densities should assist in delivering further opportunities in terms of local jobs as well as a possibility of a shift towards higher paid sectors.
- 20.9.3 The Council recognises, however, that there remains a demand for sites which are more suited to traditional industrial activities and the Local Plan seeks to ensure sufficient provision to meet local need in this regard. Additionally **DM 38** (Employment Led Regeneration) and **DM 51** (Warehouse living) support the regeneration of designated sites to provide mixed-use developments "where this is necessary to facilitate renewal and regeneration", taking account of viability considerations.
- 20.9.4 **DM 41** (New Town Centre Development) supports Haringey's town centre hierarchy and sets criteria for new developments outside recognised town centres to ensure that they satisfy the sequential test in the National Planning Policy Framework.

- 20.9.5 It is also worth noting that a number of other policies could have implications for economic growth, albeit to a lesser extent. These policies include:
- DM 10 (Housing Supply) and DM 11 (Housing Mix) seek to meet housing need sustainably in the borough. New housing in sustainable locations could benefit economic growth by increasing the size of the workforce in the borough and the quality and affordability of housing; potentially attracting businesses to the area.
 - DM 31 (Sustainable Transport) seeks to improve public transport, walking and cycling provision which could improve accessibility to work for employees as well as encourage people to travel and spend money within the local economy.
 - DM 20 (Open Space and Green Grid) would improve the quality of the natural and built environment. This could help draw businesses to the borough through providing a high quality environment which is attractive to business.
 - DM 54 (Facilitating Telecommunications Development) seeks to maximise the sustainable economic benefits of modern telecommunications infrastructure.

20.9.6 **In conclusion**, policies should lead to widely enhanced local employment opportunities and facilitate redevelopment of under-used employment sites. The net effect should be to grow and diversify the local economy, and hence **significant positive effects** are predicted; however, there may be some instances where particular sectors find it more difficult to operate in Haringey.

20.10 Skills and training

20.10.1 **DM 48** (Use of Planning Obligations) seeks to create local opportunities for employment and training including both apprenticeships and work experience in line with Policy SP9. This would aid in the up skilling of the local labour force and would provide opportunities for the unemployed.

20.10.2 As per the **recommendation** made within the Interim SA report (February 2015), the Council will seek opportunities for locally sourced labour in the construction phase of development, as set out in **DM 21** (Sustainable Design, Layout and Construction).

20.10.3 **In conclusion**, policies are unlikely to lead to significant effects however there are likely to be some minor positive effects where opportunities for skills are provided through planning obligations.

20.11 Economic inclusion

20.11.1 **DM 13** (Affordable Housing) seeks to ensure that the maximum reasonable amount of affordable housing provision is secured, in line with Strategic Policy SP2. This would likely allow more financially constrained residents have a better physical accessibility to local and London-wide jobs and opportunities; and allow those on low incomes to access employment opportunities that they would not otherwise be able to access if required to pay full market rates.

20.11.2 **DM 37** (Maximising the Use of Employment Land and Floorspace) seeks to maximise employment densities on sites and deliver a higher number of jobs through modernising stock and intensifying the land use. This may lead to positive effects in terms of attracting prospective employers to Haringey as well as delivering new jobs that can potentially be taken up by local residents.

20.11.3 **DM 38** (Employment Led Regeneration) seeks to facilitate employment development on selected sites where viability issues would otherwise limit potential for employment generating uses. This will have positive effects in terms of ensuring sites fully contribute to making provision for local jobs; however, it is recognised that a shift in the employment land portfolio could have some negative implications for those that rely on more traditional industry.

- 20.11.4 **DM 39** (Warehouse Living) allows a bespoke housing product within designated areas. Warehouse living units can help facilitate flexible working patterns through encouraging new housing in sustainable locations that enable the user to work within the unit.
- 20.11.5 **DM 48** (Use of Planning Obligations) seeks to create local opportunities for employment and training through apprenticeships and work experience in line with Policy SP9. This would aid in the up skilling of the local labour force and would improve accessibility to local employment opportunities delivered through the plan, and also London-wide jobs planned elsewhere.
- 20.11.6 In **conclusion**, the preferred approach is likely to lead to positive effects in terms of economic inclusion through delivering additional jobs, affordable housing and supporting employment led regeneration and warehouse living units where suitable. However, it is not clear that significant positive effects will result, given some uncertainties around the link between the nature of jobs available (now and in the future) and the characteristics of the local workforce.

20.12 Town centres

- 20.12.1 **DM 01** (Delivering High Quality Design) and **DM02** (Accessible and Safe Environments) should ensure that development proposals accord with the design principles for the locality as well as national and regional policy. The policies expect proposals to apply and incorporate development design in accordance with the particular area's characteristics while conserving or enhancing local biodiversity interest. In doing so it should lead to significant positive impacts in supporting local distinctiveness and build quality while minimising impact on the local environment. Similarly, **DM 05** (Locally Significant Views and Vistas) should also help to conserve the borough's local character through the need for proposals to demonstrate that they would minimise disturbance to any Locally Significant Views.
- 20.12.2 **DM 08** (Shopfronts, Signs and On Street Dining) and **DM 03** (Public Realm) both seek to ensure that development is appropriate in design and appearance, compatible with its surroundings and that it retains important landscape features. In particular **DM 08** seeks to protect the identity and quality of the town centre; and seeks to ensure that replacement buildings will actually bring about improvements and conversions which positively contribute to the established local character and sense of place.
- 20.12.3 With regard to town centre development, **DM 42** (Primary and Secondary Frontages), **DM 43** (Local Shopping Centres) and **DM 44** (Neighbourhood Parades and Other Non-Designated Frontages) seek to maintain and enhance existing provision and provide an appropriate range of facilities and services; provide opportunities for commercial development including retail and leisure; improve and enhance vitality and viability and improve the links between employment, shopping and services. This approach should help improve the attractiveness and vitality of town centres, in particular at Wood Green as the borough's principal centre and a Metropolitan Centre in the London Plan.
- 20.12.4 **DM45** (Maximising the Use of Town Centre Land and Floorspace) supports the diversification of town centres to help support their vitality and viability. The policy seeks the beneficial use of underused or vacant upper storeys or town centres and other town centre sites, including through appropriate mixed use development.
- 20.12.5 **DM 41** (New Town Centre Development) seeks to protect the borough's established town centre hierarchy and sets a criteria for new developments outside recognised town centres to ensure that they satisfy the sequential test in the National Planning Policy Framework. This policy should preserve the role and function of settlements in the borough and ensure that 'out of town' retail complements town centre uses.
- 20.12.6 **DM 46** (Betting Shops) and **DM 47** (Hot Food Takeaways) seek to ensure that and hot food takeaway and betting shops do not cluster and significantly affect the quality of the environment in centres. The policies seek to protect the identity and quality of the town centre, recognising that cluster of these uses can affect the character of a centre, and that there needs to be a variety of shops and services on the high street.

- 20.12.7 In **conclusion**, the proposed approach is likely to help to ensure that vitality and vibrancy of town centres can be enhanced, whilst ensuring that the borough's town centres are easily accessible and meet local needs and requirements. Policies seek to promote high quality design and public realm and address potential clusters of hot food takeaways and betting shops that can be detrimental to centres. **Significant positive effects** are likely.

20.13 Biodiversity

- 20.13.1 The borough contains a range of wildlife sites, in addition to non-protected areas of importance to biodiversity in the wider landscape, such as wildlife corridors. **DM 19** (Nature Conservation) seeks to protect and enhance the diversity and richness of the borough's flora and fauna to provide a rich and varied landscape and ecological foundation to Haringey. The policy also aims to provide protection to existing ecological assets and enhance the contribution these make to the local landscape character. In line with this, **DM 20** (Open Space and Green Grid) seeks to protect and enhance the ecological benefits of open space and outlines that proposals for any local open space improvements must not have a detrimental impact on nature conservation and biodiversity. Additionally **DM 20** seeks to ensure that all new development providing new or replacement open space connects that provision to the All London Green Grid.
- 20.13.2 The approach outlined in **DM 21** (Sustainable Design, Layout and Construction) addresses the important contribution vacant roof space and vertical surfaces can have to climate change adaptation when being used for urban greening, albeit acknowledging that in some cases such approaches will be impractical.
- 20.13.3 Policy **DM 25** (Sustainable Drainage Systems) seeks to maximise the biodiversity benefits of this water management infrastructure, however the full extent of benefits are uncertain as these will vary on a case by case basis and depending on the drainage techniques used.
- 20.13.4 In **conclusion**, the proposed policies would likely result in **significant positive effects** in terms of biodiversity, through protecting and enhancing designated and non-designated sites, providing greater connectivity between sites and delivering enhanced open and green space provision.

20.14 Townscape and cultural heritage

- 20.14.1 Townscape character and cultural heritage are given due consideration through **DM 01** (Delivering High Quality Design), **DM 02** (Accessible and Safe Environments) and **DM 03** (Public Realm) as development proposals are required to deliver high quality design and demonstrate how they respond to the character of the development site and the surrounding area/street scene. This should ensure that new development complements surrounding buildings and enhances the character of Haringey.
- 20.14.2 Locally Significant Views are important visual corridors in Haringey. **DM 05** (Locally Significant Views and Vistas) aims to manage these views by requiring development proposals to demonstrate how they will harness the opportunities these views present and minimise disturbance on these views. This will assist in protecting the visual amenity of Haringey from insensitive or out of character development.
- 20.14.3 **DM 06** (Building Heights) helps to protect the local and historic environment by ensuring that tall and large buildings are situated in appropriate locations and do not result in unacceptable impacts on townscape character, cultural heritage and its setting. Furthermore the Council is seeking the retention of traditional shopfronts of distinctive character that contribute to the visual, architectural or historic quality of the local townscape via **DM 08** (Shopfronts, Signs and On Street Dining). Also, advertisements are to be more tightly controlled through **DM 03** (Public Realm). There is a requirement for adverts to be of a high standard and sensitive to their visual appearance on buildings; especially in the case of listed buildings and conservation areas.

- 20.14.4 **DM 09** (Management of the Historic Environment) requires development proposals in designated Archaeological Priority Areas to be assessed and evaluated prior to development; and may require significant finds to be excavated or preserved in situ. This would ensure that potential archaeological heritage is protected and not sterilised by development.
- 20.14.5 **DM 09** (Management of the Historic Environment) will ensure that heritage assets and their setting are preserved and enhanced in a manner which is consistent with their significance. DM 12 supports proposals that secure the preservation, conservation or enhancement of heritage assets and their settings, outlines when loss of a heritage asset, would be acceptable, sets out the support for adaptive reuse of buildings and criteria in respect of enabling development. The policy supports the sensitive refurbishment and redevelopment of heritage assets, subject to criteria, provided the development retains and enhances the significance of the asset. The policy recognises that heritage assets can as a foundation for regeneration of the wider area. These policies contribute to the positive use of historic assets in Haringey and the sustainable and sensitive redevelopment of them to help meet identified needs but also retain cultural heritage assets.
- 20.14.6 Other policies that could have implications for townscape and cultural heritage include DM 50 (Public Houses), which specifies that any change of use should not affect significant features of historic or character value.
- 20.14.7 In **conclusion**, the proposed approach would lead to **significant positive effects** on development in terms of the townscape and cultural heritage. Policy will be in place to protect and enhance existing assets, including heritage assets, but also allow them to be modified where appropriate. Locally Significant Views will be protected and policy seeks to site tall and taller buildings in the most appropriate locations.
- 20.15 Open space**
- 20.15.1 The approach set out in **DM 19** (Nature Conservation) set out that development should not to lead to adverse effects on designated and other non-designated nature conservation sites and that the value of these sites will be protected. Where proposals cannot reasonably avoid harm to nature conservation sites, it requires appropriate mitigation measures to be implemented.
- 20.15.2 **DM 26** (Open Space and Green Grid) seeks to ensure that the boroughs open space and similarly designated land are enhanced and protected from inappropriate development. This should also result in positive effects as it will ensure that development proposals do not lead to the whole or partial loss of open spaces without an assessment of the current level of provision, and the creation of a suitable replacement where necessary or financial contributions to enable the provision of new open spaces. The policy also provides for the reconfiguration of open space where this would have demonstrable improvements in the quality of and access to open space.
- 20.15.3 **DM 26** (Open Space and Green Grid) also outlines the requirements to where possible, to connect all new or replacement open space, to the All London Green Grid. This policy will contribute a positive effect to the boroughs open space by promoting access to open space through the use of pedestrian and cycle linkages within and between the Green Grid.
- 20.15.4 Other policies that could have implications for open space include: DM 34 (Environmental Protection); DM 01 (Delivering High Quality Design); DM 03 (Public Realm); and DM 48 (Use of Planning Obligations).
- 20.15.5 In **conclusion**, policy measures should help to ensure that **significant positive effects** are achieved against the baseline, particularly through improving the quality of existing open spaces. As per the **recommendation** from the Interim SA Report (February 2015), the DM Policies have been revised to emphasise the role which enhancements to open space can make in terms of green infrastructure and the Green Grid.

20.16 Water resources

- 20.16.1 **DM 18** (Residential Basement Development and Lightwells) provides criteria for planning applications for basement development and lightwells. The policy has a general reference to development not causing harm to the natural environment. It also contains specific reference to not causing harm to the local water environment, ground conditions and biodiversity. This would provide protection to both surface water and groundwater resources.
- 20.16.2 **DM 21** (Sustainable Design, Layout and Construction) requires new development to fully consider incorporating living roofs and green walls into their design as far as it is practicable to do so. While living roofs and green walls are primarily promoted in order to manage water run-off rates, they can also have benefits in terms of improving the quality of run-off water.
- 20.16.3 **DM 24** (Managing and Reducing Flood Risk) focuses on managing flood risk and contained overall key principles when designing schemes in flood prone areas. These principles include contributing to the naturalisation of watercourses and managing water and waste water discharges (in line with **DM 29**, On-site Management of Waste Water and Water Supply), both of which would be expected to contribute positively to enhancing to quality of the borough's water resources.
- 20.16.4 **DM 25** (Sustainable Drainage Systems) promotes the use of Sustainable Drainage Systems (SuDS) for developments. While the focus of SuDS tends to be primarily on managing water run-off and infiltration rates, the policy states that systems should also be designed to result in a net improvement in water quality and provide for clean and safe water at the surface.
- 20.16.5 **DM 27** (Protecting and Improving Groundwater Quality and Quantity) focuses on protecting groundwater and requires, amongst other things, that development does not adversely affect groundwater quality during design, construction or operation. The policy gives further direction specifically on limiting disturbance to natural groundwater flows and emphasises that planning permission will be refused where development presents unacceptable risks to groundwater in source protection zones (SPZs).
- 20.16.6 **DM 28** (Watercourses and Flood Defences) promotes the naturalisation of watercourses, in accordance with the Thames River Basin Management Plan and the London River Restoration Action Plan. The policy also provides direction on culverts, stating that there is general presumption against development where culverting would adversely affect the functioning of main rivers and ordinary watercourses. Furthermore, development on sites already containing culverted watercourses, are expected to investigate measures to restore sections of the watercourse.
- 20.16.7 **DM 29** (On-site Management of Waste Water and Water Supply) covers surface water and waste water drainage with the onus on the Council (working with Thames Water) to ensure that there is adequate capacity in the local public sewer network to meet existing and future foreseeable demand. Where connection to the local public sewer is not available for a proposed development, alternative (non-mains) drainage options would be considered but would be subject to control by the Council. The policy also provides the Council with the ability to restrict non-mains drainage in SPZs.
- 20.16.8 In **conclusion**, the proposed policies related to water resources are expected to have a positive effect in terms of ensuring the protection of water resources at the planning applications stage. Policy will also encourage naturalisation / restoration of watercourses in some cases. As per the **recommendation** made in the Interim SA Report (February 2015), the supporting text to policy DM28 has been amended slightly to set out further detail about where opportunities for site deculverting should be investigated.

20.17 Soil and land quality

- 20.17.1 The Greater London Authority has identified 29 Previously Developed Land (PDL) sites in Haringey, which cover 84.9ha of land. The vast majority (86%) of PDL is already allocated within the Unitary Development Plan or already have planning permission and only 2% of sites are without planning permission. Sites with vacant or derelict buildings account for the remaining 12% of Haringey's PDL.
- 20.17.2 The growth aspirations for the borough mean that redevelopment of PDL is likely. The DM Policies DPD as currently drafted does not provide any policy direction promoting the development of PDL; however this is not considered necessary given that 86% of PDL in the Borough has either already been allocated or has planning permission for redevelopment.
- 20.17.3 PDL can often be contaminated and the borough does contain a number of contaminated sites due to historical industrial uses. Where redevelopment of PDL is proposed, **DM 23** (Environmental Protection) contains protections to manage risks to human and environmental health from potentially contaminated land. The redevelopment of contaminated land (including land containing derelict buildings) could help the remediation of brownfield land.
- 20.17.4 Other policies that could have implications for soil and land quality include DM 25 (Sustainable Drainage Systems), which promotes the use of SuDS for new development but recognises that on some sites, land contamination issue may make the use of SuDS impractical. In these instances, an alternative approach is advocated.
- 20.17.5 In **conclusion**, it is considered that DM 23 would ensure that the potential environmental and human health risks of development on contaminated land would be adequately considered and managed through the planning process. Significant effects are, however, unlikely.

20.18 Flood risk and climate change

- 20.18.1 Flood risk is greatest in the east of the borough with Tottenham Hale being the worst affected ward in the borough with more than 50% lying within Flood Zone 2 (low to medium risk of flooding). Northumberland Park to the north of Tottenham Hale is also largely within Flood Zone 2. The wards of Tottenham Green, Seven Sisters and West Green contain smaller areas lying in Flood Zone 2 and Alexandra and White Hart Lane have very small areas at risk from flooding. It should also be noted that small areas within Northumberland Park, Tottenham Hale and Seven Sisters lie within Flood Zone 3, which is land with a high risk of flooding.
- 20.18.2 Amongst other things, climate change is predicted to increase the intensity of rainfall which has the potential to increase flood risk in the borough. This is particularly an issue given the growth aspirations in the Local Plan. Traditionally, urban development has led to an increase in impervious hard surfaces (e.g. roads, car parks, roofs etc.) which typically increases run-off rates from what they would be naturally.
- 20.18.3 **DM 18** (Residential Basement Development and Lightwells) sets out the principles for basement development and lightwells. A major focus of this policy is on ensuring that development, whether underground or above ground, will not cause adverse flooding effects. For proposed underground works a particular additional consideration of the policy is ensuring that development does not increase the risks posed to people and property by flooding. This is a particular consideration for basement extensions to provide habitable rooms.
- 20.18.4 **DM 21** (Sustainable Design, Layout and Construction) promotes the use of living roofs and green walls for development, where it is practicable to do so. Living roofs and green walls can act to absorb rainfall while ultimately reduces runoff and helps to reduce flood risk.

- 20.18.5 **DM 24** (Managing and Reducing Flood Risk: Key principles), **DM 25** (Sustainable Drainage Systems) and **DM 26** (Critical Drainage Areas) will work together to ensure that new development gives due regard to assessing and mitigating flood risk. This means ensuring that the development itself is not subject to an unacceptably high level of risk as well as ensuring that the development does not increase flood risk elsewhere. DM 24 requires a flood risk assessment (FRA) to be undertaken to inform development in flood risk areas. This is likely to be required for flood risk areas in the east of the borough. It is noted also that in developing the Haringey Local Plan, a Strategic FRA was used to inform (amongst other things) the siting of proposed development (referred to as the 'sequential test'). DM 25 requires the use of sustainable drainage system (SuDS) for new development with the primary aim of reducing surface water run-off, which has been identified as the main cause of flooding in the borough. DM 26 contains particular requirements for nine areas in the borough which have been identified as critical drainage areas (CDAs). For development in these areas, additional assessment requirements will apply, recognising that there is higher risk.
- 20.18.6 **DM 28** (Watercourses and Flood Defences) applies to sites containing flood defences or in close proximity to flood defences. The policy stipulates minimum separation distances between development and investigating opportunities to remove hard flood defences. It also promotes the investigation of naturalising existing modified watercourse (e.g. through the removal of culverts and hard landscaped channels etc.). Naturalised watercourses can help to reduce the speed of water run-off and offer greater capacity for flood storage.
- 20.18.7 Other policies that could have implications for flood risk and climate change include:
- DM 29 (On-site Management of Waste Water and Water Supply)
 - DM 34 (Driveways and front gardens)
 - DM 21 (Sustainable Design, Layout and Construction).
- 20.18.8 In **conclusion**, the proposed DM policies provide for an adequate site specific assessment, proportionate to the risk (e.g. Flood Zone 2, Flood Zone 3 or CRA). Policies will also require the use of SuDS for all new development, which is considered highly beneficial. Overall, it is considered that the Plan contains adequate policies to manage flood risk and that there will be a minor positive effect.

20.19 Air quality

- 20.19.1 The whole borough is designated as an Air Quality Management Area (AQMA) for PM10 and NO₂. Major roads provide a significant proportion of PM10 and NO₂ emissions in Haringey. There are no sites within the borough, which are listed as producing emissions to air under the Environment Agency's Pollution Inventory although the Edmonton Solid Waste Incinerator is located just beyond the north-east boundary of the borough.
- 20.19.2 **DM 23** (Environmental Protection) ensures that the effects on air quality of new development are assessed and adequately mitigated. Furthermore, the policy would also mean where air quality assessment are required, they assess the potential effect of air quality on proposed development. This is intended to address air quality having an adverse effect on newly introduced receptors (e.g. if a new residential development was proposed in close proximity to a busy road).
- 20.19.3 With most of the emissions in the borough arising from road traffic emissions, reductions in emissions will be achieved by promoting modal shift to sustainable (and low emissions) forms of transport. One of the main methods of achieving modal shift is to promote development (including higher density development in some areas) in areas which are currently well served by public transport or will be well served in the future. **DM 06** (Building Heights) specifically addresses the clustering of tall buildings and notes that the only areas in the borough where this is likely to be appropriate.

- 20.19.4 **DM 15** (Specialist Housing), **DM 16** (Residential Conversions), **DM17** (Houses in Multiple Occupation), **DM 38** (Employment Led Regeneration) also promote development in locations served by public transport and walking and cycling and in doing so seek to reduce the need for travel by private motor vehicle. Collectively, this group of policies would be expected to have a positive effect in terms of reducing emissions to air from road traffic.
- 20.19.5 **DM 31** (Sustainable Transport) requires that developments with high trip generating characteristics be located in areas of high public transport accessibility and also that travel plans are produced in accordance with Transport for London thresholds. This policy also seeks that car parking is managed, and in some cases not provided at all, to reduce generated vehicular-based travel. DM 32 also makes allowance for car capped or car free development.
- 20.19.6 In **conclusion**, the proposed policies reflect a considerable focus on promoting sustainable transport, and hence would be expected to have a positive effect in terms of improving air quality. At this stage it is not possible to provide a further comment on the magnitude of this positive effect.
- 20.20 Noise**
- 20.20.1 The Council supports the Mayor of London's noise strategy 'Sunder City – The Mayor's Ambient Noise Strategy' (March 2004) which focuses on reducing noise through better management of transport systems, town planning and the design of buildings. This also includes minimising the noise on roads and railways and the careful siting of noisy activities.
- 20.20.2 Currently there is no evidence to indicate that exposure to high levels of noise is a widespread issue for the borough (notwithstanding that some receptors may currently experience high levels of noise). With the general intent of the DM Policies DPD being towards facilitating growth in the borough (particularly to meet the London Plan's housing targets), land use intensification as well as mixed use development is likely to occur in a number of selected areas throughout the borough. If not managed properly, there is the potential that development could give rise to adverse noise effects.
- 20.20.3 **DM 23** (Environmental Protection) seeks to ensure that the noise effects of new development are assessed and adequately mitigated. Furthermore, the policy would also mean that, where a noise assessment is required, it would assess the potential effect of existing noise on proposed development. This is intended to address noise having an adverse effect on newly introduced receptors (for instance, if a new residential development was proposed close to an industrial park or a busy road).
- 20.20.4 It is also notable that the DM Policies DPD encourages the use of sustainable forms of transport, such as walking and cycling and public transport (particularly through **DM 02**, **DM 20**, and **DM 31**). In general terms it would be expected that these measures would contribute to a reduction in the number of journeys made by private car; and, given that road traffic is a major contributing factor to ambient noise levels, any measure to reduce the number of car trips would be expected to have a positive effect on reducing ambient noise levels. Benefits will be relatively minor, however.
- 20.20.5 In **conclusion**, a focus of the proposed policies is on promoting the use of sustainable forms of transport, which could lead to benefits in terms of noise. With regards to DM 23, although the policy is concise it is considered that it provides sufficient policy direction and regulatory control to ensure that potential noise effects are adequately considered and mitigated as part of the development control planning process. Given the growth aspirations in the borough, noise is likely to be a key issue (even where it is not particularly an issue at present).

20.21 Energy and carbon

- 20.21.1 A major challenge for the borough is to accommodate the proposed level of growth within the borough while at the same time reducing carbon emissions. These two objectives potential appear incompatible. However, between 2005 and 2011 the population of Haringey is estimated to have increased by 11% while the total annual CO₂ emissions reduced from 1,037kT to 870kT. This increase is due partly to local carbon reduction initiatives but does also reflect national trends, including year variations in average temperature, the economic downturn, falling real incomes and changes to the power generation fuel mix as we move from coal to gas and more renewable energy.¹¹ While the reasons for a reduction in the borough's CO₂ emissions between 2005 and 2011 may not be solely due to local initiatives, this does show that it is possible to effectively decouple development and carbon emissions.
- 20.21.2 **DM 01** (Delivering High Quality Design), **DM 02** (Accessible and Safe Environments), **DM 12** (Housing Design and Quality) and **DM 21** (Sustainable Design, Layout and Construction) set out design standards for development. The policies cover a wide range of design considerations, with DM 21 in particular having energy implications. This policy advocates design having regard to climate change adaptation and mitigation. It encourages retrofitting, natural ventilation, living roofs and green walls. As well as having drainage benefits, green walls and living roofs also improve the thermal performance of buildings reducing the need for mechanical heating and cooling.
- 20.21.3 Strategic Policy SP4 requires new developments to reduce energy use and carbon emissions during the design, construction and occupation phases. The policy seeks a step change in carbon emissions reduction in the borough so that all new residential development is zero carbon from 2016 onwards, and all new non-residential development from 2019 onwards. While Local Plan Strategic Policy SP4 should be followed, the DM Policies DPD does recognise that there may be specific circumstances where it is not possible for a proposed development to meet the required CO₂ reduction levels through on-site measures. **DM 21** (Sustainable Design, Layout and Construction) provides for carbon offsetting where on-site solutions are not practicable or viable, subject to national and regional policy. This includes off-site measures or financial contributions (via a section 106 agreement). It is considered that this policy would provide adequate flexibility for development proponents while not undermining the intent of Strategic Policy SP4.
- 20.21.4 **DM 22** (Decentralised Energy) promotes connections to decentralised energy (DE) networks for new development in line with the London Plan target for 25% of heat and power used in London to be generated through the use of localised DE systems by 2025. DE energy systems generate electricity locally which reduces transmission losses and lowers carbon emissions.
- 20.21.5 It is also notable that the DM Policies DPD encourages the use of sustainable forms of transport, such as walking and cycling and public transport (particularly through **DM 02**, **DM 20** and **DM 31**). In general terms it would be expected that these measures would contribute to a reduction in the number of journeys made by private car compared to how many trips would occur if high quality and convenient alternative transport options were not available. This would reduce CO₂ emissions from transport in the borough.
- 20.21.6 In **conclusion**, the DM Policies DPD will have a positive effect in terms of reducing per capita carbon emissions in the borough; however, it is not possible to determine whether this will result in continuing reductions in total CO₂ emissions from the borough to allow the borough to reach its target of a 40% carbon reduction in Haringey by 2020. While the DM Policies DPD will assist in meeting the overall emissions reductions targets for the borough, other measures will also be required, such as those set out in the Council's 'Third Annual Carbon Report 2013'.

¹¹ Haringey Council (2013) Third Annual Carbon Report 2013.

20.22 Waste management

- 20.22.1 Every year Haringey residents generate approximately 366kg of waste per person. Overall, residents produced 85,000 tonnes of waste each year. In 2006-2007, 22% of waste was recycled. The remaining residential and commercial waste, if suitable, is sent for incineration at Edmonton Waste Incinerator, which generates electricity. Around 75,000 homes currently receive a green box recycling service, enabling them to recycle a wide range of goods. In 2007-2008, Haringey exceeded their recycling and composting target with 25.68% of all waste sent to recycling and composting.
- 20.22.2 **DM 04** (Provision and Design of Waste Management Facilities) requires that new development makes provision for adequate waste storage and recycling facilities. It also requires the preparation of a waste management plan and encourages on-site composting for development with gardens. The policy has been updated since Regulation 18 stage to provide additional requirements for flatted development.
- 20.22.3 Other policies that could have implications for waste management include:
- DM 22 (Residential Conversions)
 - DM 23 (Houses in Multiple Occupation) in relation to providing adequate refuse storage facilities
 - DM 30 (New Waste Facilities) also seeks to ensure that new waste facilities support the principles of sustainable development and sets out that additional requirements will be set out in the North London Waste Plan.
- 20.22.4 In **conclusion**, the approach of the DM Policies DPD in terms of waste should have the effect of encouraging waste management and recycling for new development. Given the growth aspirations for the borough, this would be expected to contribute to a reduction in per capita terms of waste. The proposed DM policies on their own would not be expected to lead to significant reductions in waste volumes in the borough, either in per capita or net terms. Achieving more significant reductions is likely to require measures outside the scope of the DM Policies DPD. No effects are predicted in terms of delivery of waste facilities. This reflects the fact that Haringey Council is one of the seven north London councils developing the North London Waste Plan Development Plan Document.

20.23 Sustainable transport

- 20.23.1 Many parts of the borough already have relatively good levels of public transport accessibility and walking levels are slightly higher than the London average. The growth aspirations for the borough mean that demand for travel will inevitably increase. Planned integration of development with transport will be essential to ensuring that the increased demand for travel is met primarily using sustainable forms of transport. This will be achieved by giving travellers convenient access to sustainable transport options.
- 20.23.2 With large scale development planned within Haringey, the overall policy direction of the DM Policies DPD is to promote an integrated approach to land use and transport planning that minimises the need to travel and encourages sustainable travel choices. This can mean focusing land use intensification around transport interchanges (e.g. the siting of tall buildings as set out in **DM 06**). Policies are included that promote the consideration of accessibility by public transport, cycling and walking when considering the location of proposed development such as for specialist housing (**DM 15**) and community facilities (**DM 49**).

- 20.23.3 **DM 31** (Sustainable Transport) requires that developments with high trip generating characteristics be located in areas of high public transport accessibility and also that travel plans are produced in accordance with Transport for London thresholds. This policy (along with **DM 32**) also seeks that car parking is managed, and in some cases not provided at all, to reduce the demand for travel by private cars. **DM 32** (Parking) also promotes the use of car club schemes as a means of reducing car use, as well as making allowance for car capped or car free development.
- 20.23.4 **DM 38** (Employment Led Regeneration) promotes proposals for mixed-use redevelopment on sites within designated Local Employment Area: Regeneration Areas where this is necessary to facilitate employment led renewal and regeneration. This policy also requires that potential regeneration sites have high levels of public transport accessibility. This policy does also allow for some non-employment uses provided it would not result in an overall net loss of employment floorspace. The enabling of mixed-use development in certain circumstance would have a positive effect in terms of sustainable transport by reducing the need to travel by having a range of land uses in proximity to each other. There is a risk that housing built as part of such mixed-use redevelopment could have poor access to key services such as health care and education and to sustainable transport.
- 20.23.5 Other policies that could have implications for sustainable transport include:
- DM 02 (Accessible and Safe Environments)
 - DM 20 (Open Space and Green Grid) provides for improvement of pedestrian and cycle linkages within and between sites within the Green Grid which would be expected to have sustainable transport benefits
 - DM 433 (Crossovers and Vehicular Accesses)
 - DM 35 (Cycle storage in front gardens)
 - DM 49 (Managing the Provision and Quality of Community Infrastructure) in terms of managing potential effects on road safety or traffic generation.
- 20.23.6 **In conclusion**, the proposed policies will have a **significant positive effect** on encouraging the use of sustainable forms of transport. Ensuring that walking and cycling are actively encouraged as part of new development will be a matter for site specific policy and detailed planning applications, but the borough-wide DM Policies DPD policies will focus growth towards areas with existing or future high levels of public transport accessibility.

20.24 Overall conclusions

- 20.24.1 The appraisal presented above highlights that the draft plan performs well in terms of many sustainability issues/objectives, with significant positive effects identified as likely in terms of: education, health, housing, community cohesion, economic growth, town centres, biodiversity, townscape and cultural heritage, open space and sustainable transport. There is, however, often a degree of uncertainty around predicted positive effects given the important role that will be played by site allocation policy (which in turn will be influenced by the emerging update to the Infrastructure Delivery Plan, IDP).
- 20.24.2 No significant negative effects are predicted, although risks associated with some policy approaches. In particular, policy approaches that will drive a considerable shift in the nature of employment land in Haringey potentially have implications for economic inclusion, although it is recognised that the Plan is set in the context of delivering the Borough's strategic employment target. Objectives around 'energy and carbon' and 'open space' are notable in that there is the theoretical potential to do more (in order to meet carbon reduction standards; and reduce open space deficiencies), but it is recognised that in practice there is no potential to set more stringent policy without compromising other objectives, which are a priority locally (i.e. objectives around housing, regeneration and employment growth), and ensuring consistency with national and regional policy.
- 20.24.3 There were a limited number of recommendations made in the Interim SA Report (2015), where the appraisal highlighted a small number of instances where the plan might potentially reword or elaborate on policy wording for particular sustainability issues, and this report has noted where amendments to the Plan were subsequently made. No specific recommendations remain outstanding.

PART 3: WHAT ARE THE NEXT STEPS (INCLUDING MONITORING)?

21 INTRODUCTION (TO PART 3)

21.1.1 This part of the report explains next steps that will be taken as part of plan-making / SA.

22 PLAN FINALISATION

22.1.1 Subsequent to publication of the Pre-submission Plan / SA Report, the main issues raised will be identified and summarised by the Council, who will then consider whether the plan can still be deemed to be 'sound'. Assuming that this is the case, the plan (and the summary of representations received) will be submitted for Examination. At Examination a Government appointed Planning Inspector will consider representations (in addition to the SA Report and other sources of evidence) before determining whether the plan is sound (or requires further modifications).

22.1.2 Once found to be 'sound' the plan will be formally adopted by the Council. At the time of Adoption an 'SA Statement' must be published that sets out (amongst other things) *the measures decided concerning monitoring*.

23 MONITORING

23.1.1 At the current time, there is a need only to present 'measures envisaged concerning monitoring'. In-light of appraisal findings (i.e. predicted effects and uncertainties) presented in Part 2 above, monitoring efforts might focus on:

- Building heights in the vicinity of heritage assets;
- The way in which schemes seek to contribute to / make use of decentralised energy
- Green roofs / living walls and other sustainable design measures implemented;
- The mix of affordable housing;
- Use of green spaces and the Lee Valley Regional Park.

APPENDIX I – REGULATORY REQUIREMENTS (1)

Schedule 2 of the Environmental Assessment of Plans Regulations 2004 explains the information that must be contained in the SA Report; however, interpretation of Schedule 2 is not straightforward. The table below interprets Schedule 2 requirements.

Schedule 2

Interpretation of Schedule 2

The report must include...

The report must include...

(a) an outline of the contents, main objectives of the plan and relationship with other relevant plans and programmes;	An outline of the reasons for selecting the alternatives dealt with (i.e. an explanation of the 'reasonableness' of the approach)	i.e. answer - <i>What has Plan-making / SA involved up to this point?</i> [Part 1 of the SA Report]	
(b) the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan	The likely significant effects associated with alternatives, including on issues such as... ... and an outline of the reasons for selecting the preferred approach in light of the alternatives considered / a description of how environmental objectives and considerations are reflected in the draft plan.		
(c) the environmental characteristics of areas likely to be significantly affected;	The likely significant effects associated with the draft plan		
(d) any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;	The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects of implementing the draft plan		
(e) the environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan and the way those objectives and any environmental considerations have been taken into account during its preparation;	A description of the measures envisaged concerning monitoring	i.e. answer - <i>What happens next?</i> [Part 3 of the SA Report]	
(f) the likely significant effects on the environment including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors;	An outline of the contents, main objectives of the plan and relationship with other relevant plans and programmes	i.e. answer - <i>What's the Plan seeking to achieve?</i>	
(g) the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan;	The relevant environmental protection objectives, established at international or national level	i.e. answer - <i>What's the 'context'?</i>	i.e. answer - <i>What's the scope of the SA?</i>
(h) an outline of the reasons for selecting the alternatives dealt with and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information	The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan'	i.e. answer - <i>What's the 'baseline'?</i>	
(i) a description of the measures envisaged concerning monitoring.	Environmental characteristics of areas likely to be significantly affected	i.e. answer - <i>What are the key issues & objectives?</i>	
	Key environmental problems / issues and objectives that should be a particular focus of appraisal		

APPENDIX II – REGULATORY REQUIREMENTS (2)

Appendix I signposts to broadly how/where this report meets regulatory requirements. As a supplement, it is also helpful to present a discussion of more precisely how/where regulatory requirements are met.

Regulatory requirement	Discussion of how requirement has been met
Schedule 2 of the regulations lists the information to be provided within the SA Report	
a) An outline of the contents, main objectives of the plan or programme, and relationship with other relevant plans and programmes;	Chapter 4 ('What's the plan seeking to achieve') presents this information.
b) The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme;	These matters are considered in detail within the Scoping Report. The outcome of the scoping report was an 'SA framework', and this is presented within Chapter 5 ('What's the scope of the SA'). Also, more detailed messages from the Scoping Report - i.e. messages established through baseline review - are presented within Appendix III.
c) The environmental characteristics of areas likely to be significantly affected;	
d) Any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC.;	
e) The environmental protection, objectives, established at international, Community or national level, which are relevant to the plan or programme and the way those objectives and any environmental, considerations have been taken into account during its preparation;	<p>The Scoping Report presents a detailed context review, and explains how key messages from the context review (and baseline review) were then refined in order to establish an 'SA framework'. The SA framework is presented within Chapter 4 ('What's the scope of the SA'). Also, messages from the context review are presented within Appendix III.</p> <p>With regards to explaining 'how... considerations have been taken into account' -</p> <ul style="list-style-type: none"> • Chapters 5 explains how/why understanding of the issues that should be a focus of alternatives appraisal was refined subsequent to consultation/SA in Feb 2015. • Chapters 6-18 explain, for each of the issues that is a focus of alternatives appraisal at the current time, how/why understanding of reasonable alternatives was refined subsequent to consultation/SA in Feb 2015. • Chapters 6-18 also explain the Council's 'reasons for selecting/developing the preferred approach', i.e. explain how/why the preferred approach is justified in-light of the appraisal of reasonable alternatives. • Chapter 20 ('Appraisal of the draft plan') explains how/why the preferred approach has evolved subsequent to consultation/SA in Feb 2015.

<p>f) The likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors. (Footnote: These effects should include secondary, cumulative, synergistic, short, medium and long-term permanent and temporary, positive and negative effects);</p>	<ul style="list-style-type: none"> Chapter 6-18 present alternatives appraisal findings (in relation to each of the plan issues that reasonable need to be a focus of alternatives appraisal at the current time). Chapter 20 ('Appraisal of the draft plan') presents the appraisal of the draft plan. <p>As explained within the various methodology sections, as part of appraisal work consideration has been given to the established SA scope, and the need to consider the potential to various effect characteristics/dimensions.</p>
<p>g) The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;</p>	<p>The Feb 2015 'appraisal of the draft plan' (Chapter 23 within the Interim SA Report) made a number of recommendations, and subsequently these were taken on-board by the Council when finalising the plan for publication/submission. At the current time, Chapter 20 ('Appraisal of the draft plan') concludes by highlighting a number of ways in which the plan might 'go further' in order to more fully address specific sustainability considerations; however, no explicit recommendations are outstanding.</p>
<p>h) An outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;</p>	<p>As discussed, Chapters 5-18 deal with 'Reasons for selecting the alternatives dealt with', in that there is an explanation of the reasons for focusing on particular issues and options. Also, Chapters 6-8 explain the Council's 'reasons for selecting/developing the preferred approach' in-light of alternatives appraisal.</p> <p>Methodology/limitations are discussed at various places, ahead of presenting appraisal findings, and limitations are also discussed as part of appraisal narratives.</p>
<p>i) description of measures envisaged concerning monitoring in accordance with Art. 10;</p>	<p>Chapter 23 presents 'measures envisaged concerning' monitoring.</p>
<p>j) a non-technical summary of the information provided under the above headings</p>	<p>The NTS is a separate document.</p>
<p>The SA Report must be published alongside the draft plan, in-line with the following regulations</p>	
<p>authorities with environmental responsibility and the public, shall be given an early and effective opportunity within appropriate time frames to express their opinion on the draft plan or programme and the accompanying environmental report before the adoption of the plan or programme (Art. 6.1, 6.2)</p>	<p>An Interim SA Report, which essentially presented all the information required of the SA Report, was published alongside the draft plan in February 2015, under Regulation 18 of the Local Planning Regulations. At the current time, the SA Report is published alongside the pre-submission plan, under Regulation 19, so that representations might be made ahead of submission.</p>
<p>The SA Report must be taken into account, alongside consultation responses, when finalising the plan.</p>	
<p>The environmental report prepared pursuant to Article 5, the opinions expressed pursuant to Article 6 and the results of any transboundary consultations entered into pursuant to Article 7 shall be taken into account during the preparation of the plan or programme and before its adoption or submission to the legislative procedure.</p>	<p>The Council has taken into account the Interim SA Report (Feb 2015), alongside consultation responses received, when finalising the plan for publication/submission. Appraisal findings presented within this current SA Report will inform a decision on whether or not to submit the plan, and then (on the assumption that the plan is submitted) will be taken into account when considering the plan at Examination (i.e. taken into account by the Inspector).</p>

APPENDIX III – CONTEXT AND BASELINE REVIEW

Introduction

As discussed in Chapter 4 ('What's the scope of the SA?') the SA scope is primarily reflected in a list of sustainability objectives ('the SA framework'), which was established subsequent to a review of the sustainability 'context' and 'baseline' and also subsequent to consultation. The aim of this appendix is to present summary outcomes from the context / baseline review, as the detailed issues discussed helpfully supplement the SA framework, i.e. serve to identify specific issues that should be a focus of appraisal work under the SA framework.

What's the sustainability context?

Crime

- The NPPF calls on planning authorities to ensure that developments create safe environments where crime and disorder, and the fear of crime, do not undermine quality of life. It notes that measures to design out crime should be integral.
- The 'Haringey Community Safety Strategy 2013-2017' notes that following the riots in 2011, it was recommended that the Borough strengthen efforts to seek investment in economic growth, jobs, high quality housing and improved engagement with the communities affected.

Education

- The NPPF notes that providing a 'sufficient choice of school places is of 'great importance' and there is a need on the part of planning authorities to take a 'proactive, positive and collaborative approach' towards achieving this.
- According to the London Plan, the Mayor will support the provision of education facilities in order to meet the demand generated by London's growth.

Health

- The NPPF calls for the setting strategic policies to ensure the provision of health facilities. In terms of the wider determinants of health, it notes that access to high quality open spaces and sport and recreation can make an important contribution.
- The 'Marmot Review' concluded that there is 'overwhelming evidence that health and environmental inequalities are inexorably linked'. The 'Haringey Health and Wellbeing Strategy 2012-2015' endorses the findings of the Marmot review in terms of the need to 'ensure social justice, health and sustainability are at the heart of all policies'.
- The report 'Ready for Ageing?' warns that society is underprepared for the ageing population. Meanwhile, the study 'Under the Weather' finds that heat related illness is liable to increase under climate change, but that this could be addressed through appropriate urban planning.
- At a local level, Haringey Council recently published for consultation a draft Corporate Plan, 'Building a Stronger Haringey Together'. One of the draft priorities is: "Empower all adults to live healthy, long and fulfilling lives."

Housing

- The NPPF requires that authorities meet the full, objectively assessed need for market and affordable housing wherever possible, including where housing market areas cross administrative boundaries. The NPPF also notes that:
 - Plans for housing mix should be based upon 'current and future demographic trends, market trends and the needs of different groups in the community'.
 - Good design is a key aspect in sustainable development.
 - Authorities should ensure provision of affordable housing
 - Larger developments are sometimes the best means of achieving new homes.

- Each of London's Boroughs are required to fulfil the housing targets as set out in the London Plan, and to address the suitability of housing development in terms of location, type of development, housing requirements and impact on the locality.
- 'Haringey's Housing Strategy 2009-19' sets out Haringey's approach to housing over the next ten years. It includes a vision to create 'neighbourhoods that people choose to live in with a balance of different types of homes which offer quality, affordability and sustainability for current and future generations'. In October 2014, the Council published for public consultation a new Housing Strategy 2015-2020.

Community cohesion

- The NPPF states that a planning principle is to support strategies to improve health, social and cultural wellbeing for all. There is a need to facilitate social interaction and promote the retention and development of community services and facilities.
- The report Natural Solutions notes that green spaces potentially have a role to play in increasing community cohesion by providing a neutral space for meeting and interacting.
- In the Haringey 'Sustainable Community Strategy 2007-2016' an ambition is set out to achieve an open and inclusive Borough, including through the provision of affordable housing, and the construction of mixed and sustainable communities.

Accessibility

- The NPPF notes that the planning system has a role to play in providing accessible local services that reflect community needs and support health, social and cultural well-being.
- The London Plan states that development should provide and improve access to social and community infrastructure. Inclusive design should also be adopted to take into account the needs of older and disabled people.
- The Haringey 'Sustainable Community Strategy 2007-2016' looks to ensure that the Borough's communities have easier access to open spaces, facilities and shopping areas.

Economic growth

- The European Union strategy for achieving economic growth up until 2020 focuses on smart growth, through the development of knowledge and innovation; sustainable growth, based on a greener, more resource efficient economy; and inclusive growth.
- According to the NPPF, the planning system can contribute to a responsive economy by ensuring sufficient land of the right type is available in the right places and at the right time; and by identifying and coordinating development requirements. It emphasises the need to:
 - Capitalise on 'inherent strengths', and meet the 'twin challenges of global competition and of a low carbon future'.
 - Support new and emerging business sectors, including positively planning for 'clusters or networks of knowledge driven, creative or high technology industries'.
- The Mayor's Economic Development Strategy sets an ambition for London to be the world capital of business, and to have the most competitive business environment in the world.
- The Haringey Regeneration Strategy sets out a key priority to develop a 21st century business economy that offers opportunities for sustainable employment and enterprise, to help make Haringey a place people want to work, visit and invest in.

Skills and training

- The Haringey 'Sustainable Community Strategy 2007-2016' sets an objective to extend training opportunities for people to improve their skills, especially in order to have access to jobs in key areas of commerce and growth.
- The Haringey Regeneration Strategy sets out a key priority to unlock the potential of Haringey residents through increasing skill levels and raising employment so that they can contribute to and benefit from being part of one of the most successful cities in the world.

Economic inclusion

- The London Plan notes that there is a need to tackle persistent poverty and deprivation through a policy framework that helps tackle unemployment and worklessness. In particular, there is a need to ensure Londoners have the education and skills they need.
- The Local Growth White Paper notes that growth should be broad-based industrially and geographically, ensuring everyone has access to the opportunities that growth brings.
- The Haringey 'Sustainable Community Strategy 2007-2016' sets an ambition to target poverty through targeted social inclusion initiatives.

Town centres

- The NPPF emphasises the need to support competitive town centres, and oppose schemes that will impact town centre viability. It calls for town centres to provide a diverse retail offer and to reflect local 'individuality'.
- CLG's (2012) report 'High streets at the heart of our communities' notes that local policies should look to reinforce local distinctiveness and community value of town centres, and develop their social function with a view to underpinning ongoing commercial viability.
- The London Plan calls for the scale of new retail, commercial, culture and leisure developments within town centres to reflect the size, role and function of that centre.

Biodiversity

- The NPPF emphasises the need to protect important sites, plan for green infrastructure and plan for ecological networks whilst taking account the anticipated effects of climate change. National policy reflects the EU Biodiversity Strategy's commitment to 'halt the loss of biodiversity and the degradation of ecosystem services in the EU by 2020'.
- The Natural Environment White Paper sets out the importance of a healthy, functioning natural environment to sustained economic growth, prospering communities and well-being. It signals a move towards protecting biodiversity throughout the landscape.
- The London Plan states calls for priority to be given to achieving Biodiversity Action Plans (BAP) targets and supporting sites within or near to areas deficient in accessible wildlife sites. The Haringey BAP notes that there is a need to consider biodiversity as a cross cutting agenda to be integrated into the delivery of all services.

Townscape and cultural heritage

- The NPPF calls for a 'positive strategy' towards the 'conservation and enjoyment of the historic environment', including assets most at risk. Heritage assets should be recognised as an 'irreplaceable resource' to be conserved in a 'manner appropriate to their significance'.
- The London Plan calls for Local Authorities to maintain and enhance the contribution of the cities 'built, landscaped and buried heritage' to London's environment, culture, and economy.
- English Heritage's 'Heritage at Risk National Strategy' targets the removal of a quarter of nationally designated heritage at risk assets by April 2015. Meanwhile, 'Seeing history in the view' provides a means of understanding views that are recognised as important.

Open space

- The NPPF recognises the health and wellbeing benefits of access to high quality open space and states that planning policies should be based on robust and up-to-date assessments of the needs for open space, sports and recreation facilities and opportunities for new provision. The NPPF also emphasises the 'great importance' of Green Belts and encourages local authorities to plan positively to enhance beneficial use.
- The London Plan states that boroughs should plan for green infrastructure needs to realise the current and potential value of open space to communities and support the delivery of the widest range of linked environmental and social benefits.

- Haringey's 2014 Open Space and Biodiversity Study identified that Northumberland Park Ward, Tottenham Hale Ward, part of Bruce Grove Ward, Tottenham Green Ward and east of Seven Sisters Ward have the greatest deficiency in access to open and green spaces. The recommendations include improving provision of small local parks and amenity green spaces as well as access to them and securing new open space in new developments.

Water resources

- The EU Water Framework Directive drives a catchment-based approach to water management. An Environment Agency strategy implements Directive in relation to groundwater, highlighting that groundwater is at risk from point source and diffuse pollution.
- The NPPF calls for planning authorities to produce strategic policies to deliver the infrastructure necessary for water supply and wastewater and to take account of the effects of climate change in the long term, including on water supply.
- The 'Water White Paper' notes that through measures to encourage and incentivise water efficiency (and demand management measures by water companies), the Government aspires to reduce average demand to 130 litres per head, per day by 2030.
- An Environment Agency strategy for restoring rivers in North London considers how rivers play a role in urban regeneration, providing a range of social and environmental benefits.

Soil and land quality

- The NPPF recognises the need to protect and enhance soils; prevent new or existing development from contributing to or being adversely affected by the presence of unacceptable levels of soil pollution or land instability; and remediate 'despoiled, degraded, derelict, contaminated and unstable land', where appropriate.
- The NPPF also highlights the need to encourage the effective use of land through the reuse of previously developed land, provided that this is not of high environmental value.
- The 'Safeguarding our Soils' strategy highlights the vital role soils play in supporting ecosystems, facilitating drainage and providing urban green spaces for communities.

Flood risk and climate change

- The EU's 'Blueprint to Safeguard Europe's Water Resources' promotes the use of green infrastructure, such as wetlands, floodplains and buffer strips along water courses in order to reduce vulnerability to floods and droughts.
- The NPPF notes that development should be directed away from areas at highest risk from flooding. Where development is necessary, it should be made safe without increasing risk elsewhere. New developments should be planned to avoid vulnerability to climate change.
- The 'Flood and Water Management Act' calls for the incorporation of greater resilience measures into new buildings, retro-fitting at risk properties, and utilising the environment to address risk (e.g. harnessing wetlands to store water). 'Planning for SuDS' calls for greater recognition of the multiple benefits this form of water management can provide.

Air quality

- The EU Thematic Strategy on Air Pollution aims to cut the annual number of premature deaths from air pollution-related diseases by 40% by 2020 (using 2000 as the base year).
- According to the NPPF, plans should contribute towards national objectives for pollutants, taking into account the presence of Air Quality Management Areas. New and existing developments should be prevented from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of air pollution.
- The Mayor's Air Quality Strategy notes that air pollution harms the environment and health, with greater impacts felt most severely by vulnerable people, such as children and the elderly. The London Plan seeks to ensure that development is at least 'air quality neutral'.

Noise

- The NPPF states that planning policies should aim to avoid noise that gives rise to significant adverse impacts on health and quality of life.
- The Mayor's Ambient Noise Strategy focuses on reducing noise through better management of transport systems, better town planning, and better design of buildings.

Energy and carbon

- On energy, the European Commission recommends that the EU's energy efficiency improves by 20% and the share of renewable energy grows to 20% by 2020.
- The NPPF emphasises the key role for planning in securing radical reductions in GHG, including in terms of meeting the targets set out in the Climate Change Act 2008¹². Plan-making should, for example, support efforts to deliver infrastructure such as low-carbon district heating network and increase energy efficiency in the built environment
- The London Plan seeks to reduce London's carbon dioxide emissions of 60% (below 1990 levels) by 2025. Haringey Council has set an ambitious target to reduce borough-wide carbon emissions by 40% by 2020 from a 2005 baseline.

Waste management

- The Mayor's municipal waste management strategy aims provide Londoners with the knowledge, infrastructure and incentives to change the way they manage municipal waste, including minimising its impact on the environment and unlocking its economic value.
- The seven north London boroughs are preparing a joint Waste Plan. This plan will identify a range of suitable sites for waste management uses, to meet London Plan waste apportionments, and include policies and guidelines for determining planning applications.

Sustainable transport

- The NPPF states that the transport system needs to be balanced in favour of sustainable transport modes (including walking, cycling and public transport). To minimise journey lengths planning policies should aim for 'a balance of land uses', and where practical, key facilities should be located within walking distance or be well served by public transport.
- Haringey encourages 'sustainable' forms of transport through measures including the Haringey Walking Plan, Cycling Action Plan and Haringey Cycle Route Network.

What's the sustainability baseline?

Crime

- Crime has been steadily declining across Haringey, but some neighbourhoods and groups remain more likely to fall victim to crime than others.
- Crime is particularly prevalent in Northumberland Park. The challenge facing the Borough is two-fold: to tackle persistent problems including crime 'hotspots'; and to address public concerns about crime.
- Historically, property crime (includes robbery, burglary and vehicle crime) in the Borough has contributed significantly to overall crime figures, and has also been a top concern of its residents. Unemployment is strongly correlated with acquisitive crime.
- There is a spatial dimension to crime within the borough, with crime incidents, particularly incidents of violent crime, concentrated in places with high deprivation.
- Young people are more likely to be both victims and perpetrators of violent crime and those aged 13-21 are more likely to be victims of personal robbery
- There is a strong gender dimension to violent crime with 1 in 3 violent crimes an incident of domestic violence

¹² In the UK the Climate Change Act 2008 has set legally binding targets on reducing greenhouse gas emissions in the UK by at least 80% by 2050 and 34% by 2020 against the 1990 baseline.

Education

- In terms of educational attainment, data for 2013 reveals that 64.9% of the population of Haringey has an NVQ level 3 or above, with this being above regional (64%) and national levels (55.8%).
- The percentage of Haringey residents with no qualifications (8.6%) is not particularly high, but there are localised issues. In Tottenham Hale 22.45% of residents aged 16 and over have no qualifications.
- In general, children and young people who live in the more deprived areas of Haringey tend to have a lower level of achievement than those that are from more affluent backgrounds. Educational attainment is significantly lower than the London average and lowest in White Hart Lane, Northumberland Park and Seven Sisters.
- Although levels of education are improving in the borough, certain groups, including those with the protected characteristics, can face greater barriers to educational achievement than others. For example, children who have special education needs and/or disability (SEND) tend to have lower levels of attainment.
- As a general rule children and young people who live in the more deprived areas of Haringey have lower levels of attainment than their more affluent peers. This issue has a greater impact on children from Black and other ethnic minority groups and children who are eligible for free school meals. Children from Gypsy Rome and Irish Traveller backgrounds often have low levels of attainment in Haringey schools, although their numbers are quite small.
- Post-16 attainment in Haringey is improving but opportunities for high quality academic opportunities in the east of the borough and in the sub region are limited. 85% of those young people in secondary schools feel they have to leave the borough for post-16 education.

Health

- Health and well-being in Haringey is very similar to the London average. Life expectancy rates in Haringey are increasing and are expected to improve further.
- Health inequalities in Haringey are evident; the most deprived areas in the east of the Borough tend to experience the poorest health. Health inequality is most acute in Tottenham, with a nine year gap in life expectancy when compared with the rest of the Borough. The population in the west of the borough is predominantly 'older' than the east, which will have implications for the provision of educational, health and recreational facilities.
- Childhood obesity rates in the Borough are higher than the London and England average. One in four children aged 4-5 and one in three children aged 10-11 are overweight or obese. These children are more likely to live in the east of the Borough. About 112,865 adults in Haringey are estimated to be overweight or obese.
- Health inequalities are more likely amongst certain groups of residents, including those with the protected characteristics. For example, obesity is more prevalent amongst black and minority ethnic groups with 41.4% of BME children overweight or obese compared to 23.4% of White British children.
- Women in Haringey live longer than men but spend more years of their lives in poor health (23 years versus 20 years).
- There is a distinct spatial element to health inequalities with mental illness, levels of physical activity and obesity a greater concern in more deprived parts of the borough. Men who live in the most deprived areas in the borough die on average 7.7 years younger than those in more affluent areas.
- The needs of Haringey's ageing population will be a major consideration in planning for the borough in the next 20 years to ensure essential services are within easy access for all. Flexible and appropriate design of housing, accessible community facilities and public realm design will be required in enabling older people to live healthier and independent lives.
- Environmental issues are more concentrated in certain parts of the borough. For example, town centres are a particular focus for highway congestion and poor air quality. Some issues also impact more heavily in more deprived parts of the borough, with higher accident casualty rates in the East of the borough.

Housing

- Affordability of housing is a significant issue in the area. The Borough has a relatively low proportion of home ownership (38.8%) compared to London (48.2%).
- The proportion of owner occupation is greater in the west, with concentrations of social rented housing in the east of the borough, reflecting a wider social and economic polarisation.
- The Council is currently preparing a local Strategic Housing Market Assessment, which will provide an understanding of the current and future housing market and how this relates to the borough's housing growth, needs and regeneration.
- The Borough has notable levels of homelessness, with 3000 people officially in temporary accommodation. Just over 30% of households live in social housing, which tends to be concentrated in the east of the Borough (which is more densely populated than the west).
- At just £25,138 per annum, average household incomes in Tottenham are around £17,000 less than in the west of the borough and around £8,000 less than the average household income for London.
- The 2011 Census shows that the Borough; population was recorded as 254,926. This presents a significant change from the 2001 Census. The Borough has population density of 86.2 persons per hectare; well above the London average (52.0). The Borough's population is set to increase by 31,234 over the period 2011-2021.
- Housing need is high amongst certain groups of residents including those with the protected characteristics. For example, levels of homelessness are high amongst female lone parents.
- Homelessness is also high in the age group 16-24 and 25-44 compared to the expected profile from census data.
- Homelessness data indicates Black households approach as homeless at a level which is more than twice their representation in Haringey's population.
- Some protected groups also have high levels of housing need due to higher levels of vulnerability. Homeless acceptance due to mental or physical disability is higher than would be expected given the profile of disability in the 2011 census, indicating that disability may be a factor in causing homelessness for these groups of households.
- The rate and pattern of housing development and population change will impact on wellbeing of new and existing residents and on the demand for services.

Community Cohesion

- The 2011 Census showed that Haringey's population increased by 38,390 from 216,510 in 2001 to 254,900 in March 2011 (an 18% increase).
- The borough has a higher proportion of younger people than London as a whole, which will increase pressure for housing and associated infrastructure. Nearly half the population comes from ethnic minority backgrounds.
- The proportion of older people is lower than the London average but is likely to place increasing pressure on health services in Haringey.
- Overall deprivation in the Borough is relatively high, with Haringey ranked as the 4th most deprived borough in London and the 13th most deprived local authority in England. There are particular pockets of deprivation such as in Tottenham Northumberland Park, Wood Green and Hornsey. The eight wards that make up Tottenham, which accommodate almost half of the people living in Haringey, are ranked among the 10 per cent most deprived in England.
- Compared to London, Haringey has a similar proportion of 0-19 year olds, a higher working age population and a lower proportion of older people. Those aged 25-29 and 30-34 form the two largest groups in the borough.
- Almost half of our population and three-quarters of our young people are from ethnic minority backgrounds, and around 200 languages are spoken. Our population is the fifth most ethnically diverse in the country.

- Historically, Haringey has experienced a high level of population turnover. Most population turnover occurs by people moving into and out of other parts of the UK.

Accessibility

- Education is highly accessible, with 100% of 5 to 10 year olds within 15 minutes of the nearest primary school; 99% of 11-15 year olds within 20 minutes of the nearest secondary school; and 100% of 16-19 year olds within 30 minutes of further education.
- Improved access to services and facilities is key to ensuring equality of opportunity. Certain groups may suffer particularly from reduced activity, for example those less able to travel due to mobility issues or low income.
- Analysis has shown that access to certain services and facilities is unevenly distributed in certain parts of the borough. For example, the NHS strategy identifies a deficiency of GPs in the south east of the borough, and a greater capacity requirement of practices in the north east Tottenham area.
- Further accessibility issues will arise with future population growth, especially around Tottenham Hale and Haringey Heartlands

Economic growth

- When compared with the rest of London, Haringey has levels of economic growth that are below the regional average, a higher rate of unemployment and lower gross weekly pay per capita. The level of employment declined by 7.1% between 2008-10, almost double the London and national averages.
- Haringey's economy is dominated by small businesses. 90% of the businesses employ 10 or less people. There has been a decline in industrial floorspace take-up since the 1990s, the manufacturing base has also been declining, and office space buildings are mainly second hand, older buildings. Business stakeholders have expressed concern about the range of business premises available in the borough.

Skills and training

- Figures for employment by occupation during 2013 reveal that those in group 1-3 roles¹³ (55.4%) across Haringey were higher than the London average (54.6) and significantly above the percentage for Great Britain of 44.5%. The percentage of the Borough's population that was in group 8-9 roles from April 2013 to March 2014 was 17,100, 15.5% of the total workforce. This figure is higher than the rest of London which was measured at 12.7% of the total workforce.
- The Borough is characterised by its polarised skills base. Around 21% of the Borough's working age population has a level 1 or below qualification. Meanwhile, 40% have a level 4 or above qualification.

Economic inclusion

- The total number of economically active in 2011 was 65.5% with 6.1% unemployed. This compares reasonably favourably with London, where 66.5% were economically active in 2011, with 8.4% unemployed.
- Tottenham has some of the highest levels of unemployment in London and the UK. In 2011, 63.7% of people aged 16-64 in Tottenham were in employment, below both the London and England rates of 68.2% and 70.4% respectively.
- In March 2012, the Job Seeker Allowance (JSA) claimant count in Haringey was 10,393; or 6.5% of the total working age population (16-64). This is significantly above the England and London rates.
- Labour market disadvantage is felt particularly acutely by particular groups of residents, including those with the protected characteristics. For example, the employment rate is lower for ethnic minorities, lone parents and women and is particularly low for those with mental illness or learning disabilities.

¹³ Soc 2010 major group 1-3: Managers, directors and senior officials; Professional occupations; Associate professional & technical. Soc 2010 major group 4-5: Administrative & secretarial; Skilled trades occupations. Soc 2010 major group 6-7: Caring, leisure and Other Service occupations; Sales and customer service occupations. Soc 2010 major group 8-9: Process plant & machine operatives; Elementary occupations.

- There is a clear spatial dimension to economic exclusion with the highest concentrations of households in income poverty (over 42% of households) found in parts of Northumberland Park, Tottenham Hale, Tottenham Green, West Green and Noel Park. Unemployment and the proportion of young people who are NEET (Not in education employment or training) is higher in the east of the borough.

Town centres

- Haringey has a range of town centres providing shopping and services and local employment. The Wood Green Metropolitan Town Centre is the highest ranking shopping centre in the Borough with 106,000 square metres of floorspace.
- It appears that the economic downturn is still having an impact on the retail sector, and has stunted the ability of town centres across the Borough to fulfil their role and function
- Haringey's town centre vacancy rates have increased in recent years but overall, they remain lower than national and regional averages. However, the borough's town centres are not performing equally in this respect.
- Crouch End and Green Lanes have the highest percentages of vacant town centre floor space, with 8.7% and 6.9% respectively. Wood Green (3.3%) is the best performing.

Biodiversity

- Three European Sites are within a 10 km radius of Haringey – Lee Valley Ramsar Site, Lee Valley Special Protection Area (SPA) and Epping Forest Special Area of Conservation (SAC).
- The Borough has a total of 60 areas designated as Sites of Importance for Nature Conservation Importance. Of these, five are of Metropolitan Importance, 22 of Borough Importance Grade I and Borough Grade II and 33 of Local Importance. Haringey also has five Local Nature Reserves (LNRs) - Alexandra Palace & Park, Coldfall Wood, Parkland Walk, Railway Fields and Queens Wood. The waterways also offer a valuable habitat, which it is recognised should be preserved and enhanced.
- The Lee Valley Regional Park straddles the eastern boundary of the Borough. This area is home to European designated sites and is a Site of Special Scientific Interest.
- Natural England suggests a ratio of 1 hectare of Local Nature Reserve for every 1000 of population. Haringey currently has 0.6 hectares per 1000 residents.

Townscape and cultural heritage

- The Boroughs historic assets include 467 listed buildings of Special Architectural or Historic Interest, six Grade I buildings and 434 Grade II buildings, 1150 locally listed Buildings of Merit, 29 Conservation Areas (some of which have had Character Appraisals¹⁴ completed), two Registered Parks and Gardens (Finsbury Park and Alexandra Park), 34 Local Historic Green Spaces, three Sites of Industrial Heritage Interest, and 22 Archaeological Priority Areas. Also, the view of St Paul's Cathedral and the City from Alexandra Palace is identified in the London Plan as a strategically important Viewing Corridor.
- Haringey has 16 Listed Buildings and 5 Conservation Areas on English Heritage's Heritage at Risk Register including the Grade II Listed Alexandra Palace.

Open space

- The Lee Valley presents a significant recreational waterway, which could serve to link Haringey with developments in East London, most notably the Olympic Park. The Lee Valley Regional Park is Haringey's single area of designated Green Belt and should continue to be protected. Haringey also has a network of Metropolitan Open Land and Significant Local Open Land, and the All London Green Grid Framework presents an opportunity for Haringey to enhance inter-borough green corridors.
- There is a need to improve accessibility to and quality of open spaces; explore opportunities for accessible open spaces within new development and the opportunities to link open spaces; and improve smaller open spaces and green areas.

¹⁴ LB Haringey (2014) Conservation Area Character Appraisals [online] available at: <http://www.haringey.gov.uk/conservationareacharacterappraisals> (accessed 13/10/14)

- The Borough has an overall provision of 1.7 ha of open space per 1,000 of population. Areas deficient in public open space include Northumberland Park, parts of White Hart Lane and parts of Bounds Green ward.
- Open space is fairly evenly distributed across the borough but there is a lack of allotment space in the East of the borough.

Water resources

- Haringey is located within the London catchment of the River Thames River Basin District which includes the River Lee and its main tributaries. The catchment is highly urbanised and the majority of rivers are designated heavily modified and there is a distinct lack of natural river processes throughout the catchment.
- The Moselle Brook and Stonebridge Brook is heavily modified. These Brooks are both tributaries of the Lower Lee River, classified as having 'poor' ecological status and failing to meet 'good ecological potential' under the Water Framework Directive.
- The River Lee (including the Lee Navigation) on the borough's eastern boundary is the principal watercourse in the area. Upstream of its upper confluence with Pymmes Brook the Lee has been assigned River Quality Objective (RQO) class 2 (good quality) whilst downstream of the lower confluence water quality is RQO 5 (poor quality).
- The Borough is home to the North London Artificial Recharge wells in Wood Green, Tottenham and Hornsey, where surface water is periodically pumped into the chalk aquifer to balance deep ground water abstraction. Land use activities within the source protection zones are closely monitored by the Environment Agency.
- The GLA¹⁵ estimate that buildings cover 24,000 hectares or 16% of Greater London. Crude calculations of the potential for green roofs in four areas of central London suggest that out of a surface area of 10 million m², 3.2 million m² had the potential to be greened. This would have a capacity to store in the region of 80,000m³ of rainwater at roof level, the equivalent to, approximately, the volume of water needed for 35 Olympic swimming pools.
- Haringey-specific data is not available for water consumption however at the London level¹⁶ the consumption for household water use is around 164 litres per head per day; around 20 litres per head per day higher than England and Wales. 74% of total water use is household use and 26% is non-household use.

Soil and land quality

- A variety of industrial land uses have left behind substantial contamination in the borough, which may need to be remediated before development. The Borough's Contaminated Land Strategy identified potentially contaminated sites in the borough.
- Brownfield sites should be prioritised and sites which offer the greatest capacity for development. Previously developed land (PDL) within Haringey accounts for approximately for 3% of London's total PDL area.
- The Greater London Authority had identified 29 PDL sites in Haringey, which cover 84.9ha of land. Sites with vacant or derelict buildings account for the remaining 12% of Haringey's PDL. In 2011/12, 100% of housing was built on PDL.

Flood risk and climate change

- According to the Haringey Strategic Flood Risk Assessment (SFRA), surface water runoff is the source of flood risk that potentially has the greatest effect in Haringey and is the flooding most likely to be experienced. There is also significant residual risk as a result of reservoir breach effecting large areas of the borough which is much less likely to be experienced, but the consequences would be significant.

¹⁵ GLA (2008) Living Roofs and Walls Technical Report: Supporting London Plan Policy [online] available at: <http://www.london.gov.uk/sites/default/files/living-roofs.pdf> (accessed 10/14)

¹⁶ Environment Agency (2013) State of the Environment Report for London [online] available at: <http://data.london.gov.uk/documents/SOE-2011-report.pdf> (accessed 10/14)

- Climate change effects increase the severity and frequency of the flood risk. The extent and frequency of surface water flooding would be increased across the borough. The standard of protection from river flooding is also reduced by climate change effects in some parts of the borough adjacent to the River Lea.
- The flood risk area (Zones 2 and 3) could potentially affect 5,000 properties. Flood risk is largely present in the east of the Borough. Tottenham Hale is the most vulnerable ward, with more than 50% lying within Flood Zone 2.

Air quality

- The Borough suffers poor air quality primarily because of traffic congestion. The whole borough is an Air Quality Management Area, with monitoring sites located at Haringey Town Hall and Priory Park.
- There are no sites listed as producing emissions to air, although the Edmonton Solid Waste Incinerator is located just beyond the Borough's northeast boundary.

Noise

- There is no suitable baseline data available for this SA topic, however anecdotally concentrations of noise exist along transport corridors in the Borough.

Energy and carbon

- The Borough has adopted a target of reducing its CO₂ emissions by 40% in line with the London Plan energy hierarchy. The population of Haringey is expected to increase during the plan period to 2050. If this growth occurs emissions are expected to increase.
- Haringey Annual Carbon Report explains the current situation in relation to a range of energy/carbon issues. A headline message is that: Between 2011 and 2012 Haringey's total carbon emissions increased by 6.9%. This is consistent with London wide and national trends; London wide emissions have increased by 8% and UK emissions by 5.3%.
- It is also noted that in 2013 Haringey Council led a successful application to the Department of Energy and Climate Change for 'Green Deal Communities' funding, to deliver a programme that will reduce energy costs for households and businesses in Haringey, encourage eco-retrofit and drive sustainable economic growth.

Waste management

- The total amount of Municipal Solid Waste collected by Haringey in 2011 was 115,793 tonnes. 29% of the total was sent to landfill or 33,578 tonnes. Haringey has an overall capacity for waste management of approximately 104,800 tonnes per annum.
- The Borough achieves good recycling rates. There are two Reuse & Recycling Centres and these accept an increasing range of materials and items for reuse or recycling. Other waste, if suitable, is sent for incineration at Edmonton Waste Incinerator, which also generates electricity for the Borough. The overall recycling and composting rate for the North London Waste Authority, including Haringey is 24%.

Sustainable transport

- Haringey's transport links are fairly strong, with many transport connections linking to the centre of London in minutes. Further investment in transport connectivity through Crossrail 2 will benefit Tottenham and the wider Borough, delivering a major shift in north Tottenham with high frequency services connecting Northumberland Park (as well as Tottenham Hale and Seven Sisters) with central London and other growing parts of the capital. Stronger orbital public transport capacity is required to serve key development areas and town centres. There is also a need for improved connectivity to key employment areas outside of the borough including Stratford, Brent Cross and Stansted Airport.
- Over half of Haringey households do not own a car or van (51.8%) an increase from 46.5% in 2001. This compares to 41.6% of households in London which do not have access to a car.

APPENDIX IV - EQUALITIES AND HEALTH IMPACTS

As explained within Chapter 4 (What's the scope of the SA?), the SA process undertaken for the Haringey Local Plan has sought to integrate EqIA and HIA. Relevant issues have been considered through scoping work (i.e. through context and baseline review - see Appendix III; and establishment of the SA framework - see Chapter 4) and have fed into the appraisal of alternatives (see 'Part 1') and the appraisal of the draft plan (see 'Part 2'). The aim of this appendix is to summarise and 'signpost'.

- Community cohesion is an important broad issue, recognising that: almost half of the population and three-quarters of our young people are from ethnic minority backgrounds, with around 200 languages are spoken; and historically, Haringey has experienced a high level of population turnover. The proposed approach to addressing community infrastructure through the DM Policies DPD seeks to increase quantity, quality and accessibility in relation to community infrastructure, enhancing existing infrastructure and delivering new infrastructure where necessary; however, there is also much reliance placed on the Infrastructure Delivery Plan. More generally, strong relationships between people from different backgrounds and communities are encouraged through efforts to ensure inclusive environments and through the promotion of a mix of tenure housing.
- Health is an important broad issue, recognising that: health inequalities are more likely amongst certain groups of residents, including those with the protected characteristics, e.g. obesity is more prevalent amongst black and minority ethnic groups with 41.4% of BME children overweight or obese compared to 23.4% of White British children; women in Haringey live longer than men but spend more years of their lives in poor health (23 years versus 20 years); there is a distinct spatial element to health inequalities with mental illness, levels of physical activity and obesity a greater concern in more deprived parts of the borough. The needs of Haringey's ageing population will be a major consideration in planning for the borough in the next 20 years, with a view to ensuring essential services are within easy access for all. Flexible and appropriate design of housing, accessible community facilities and public realm design will be required in enabling older people to live healthier and independent lives. The DM Policies DPD is set to improve health and wellbeing through increasing access to and quality of open space; restricting the locations in which hot food takeaways and betting shops can operate; and encouraging active travel and sustainable transport. These benefits will likely be felt in parts of the borough where existing issues are greatest.
- Education is an important broad issue, recognising that: although levels of education are improving in the borough, certain groups, including those with the protected characteristics, can face greater barriers to educational achievement than others, e.g. children who have special education needs and/or disability tend to have lower levels of attainment; as a general rule children and young people who live in the more deprived areas of Haringey have lower levels of attainment than their more affluent peers (particularly the case for children from Black and other ethnic minority groups and children who are eligible for free school meals); Children from Gypsy Rome and Irish Traveller backgrounds often have low levels of attainment in Haringey schools, although their numbers are quite small; and whilst post-16 attainment in Haringey is improving. opportunities for high quality academic opportunities in the east of the borough and in the sub region are limited. However, the DM Policies DPD has relatively little effect in this regard, as discussed under the 'education' heading within the appraisal of the draft plan ('Part 2' above).
- Crime is an important broad issue, recognising that: there is a spatial dimension to crime within the borough, with crime incidents, particularly incidents of violent crime, concentrated in places with high deprivation; young people are more likely to be both victims and perpetrators of violent crime and those aged 13-21 are more likely to be victims of personal robbery; and there is a strong gender dimension to violent crime with 1 in 3 violent crimes an incident of domestic violence. As discussed under the 'crime' heading, as part of the appraisal of the draft plan ('Part 2' above), DM policy is set to ensure that opportunities to design-out crime are realised, and policy also supports adaptive re-use and developing vacant and derelict buildings (including historic buildings).
- Housing is an important broad issue, recognising that: housing need is high amongst certain groups of residents including those with the protected characteristics, e.g. levels of homelessness are high amongst female lone parents; black households approach as homeless at a level which is more than twice their representation in Haringey's population; some protected groups also have high levels of

housing need due to higher levels of vulnerability, with homeless acceptance due to mental or physical disability higher than would be expected given the profile of disability in the 2011 census. The rate and pattern of housing development and population change will impact on wellbeing of new and existing residents and on the demand for services, and the DM policies DPD will act to maintain a mix of housing, allowing for renewal and refurbishment of the existing dwelling stock where necessary.

- Economic inclusion is an important broad issue, recognising that: labour market disadvantage is felt particularly acutely by particular groups of residents, including those with the protected characteristics, e.g. the employment rate is lower for ethnic minorities, lone parents and women and is particularly low for those with mental illness or learning disabilities; and there is a clear spatial dimension to economic exclusion with the highest concentrations of households in income poverty (over 42% of households) found in parts of Northumberland Park, Tottenham Hale, Tottenham Green, West Green and Noel Park, and unemployment and the proportion of young people who are NEET (Not in education employment or training) higher in the east of the borough. This is an important issue set to be addressed through all four plans, including the DM Policies DPD, recognising the support for redevelopment of some existing employment areas. Employment density will be increased in the vast majority of cases, and will be significantly increased overall (i.e. across the borough); however, the nature of jobs available within the borough is set to shift, and there is a risk of disproportionate effects. It is noted that there is some focus on skills and training, including support for apprenticeships and work experience.
- Environmental quality is an important broad issue, recognising that: the environmental quality of neighbourhoods makes a major contribution to people's quality of life, and a poor quality environment can impact more severely on those with the protected characteristics (e.g. vulnerable people, including children, older people and those with existing health conditions, may be restricted in their activities due to poor air quality); environmental issues are more concentrated in certain parts of the borough, e.g. town centres are a particular focus for highway congestion and poor air quality, and there being higher accident casualty rates in the relatively deprived east of the borough; and open space is fairly evenly distributed across the borough but there is a lack of allotment space in the East of the borough. DM 23 (Environmental Protection) should help to ensure an improvement in the baseline over time, but more notable effects will result from redevelopment and regeneration within areas where environmental quality is currently poor.
- Accessibility is an important broad issue, recognising that: improved access to services and facilities is key to ensuring equality of opportunity, and certain groups may suffer particularly from reduced accessibility / activity (e.g. those less able to travel due to mobility issues or low income); analysis has shown that access to certain services and facilities is unevenly distributed in certain parts of the borough, e.g. the NHS strategy identifies a deficiency of GPs in the south east of the borough, and a greater capacity requirement of practices in the north east Tottenham area. Further accessibility issues will arise with future population growth, especially around Tottenham Hale and Haringey Heartlands, however, this is only set to be addressed through the plans at the current time to a limited extent, as work on the Infrastructure Delivery Plan (IDP) is still on-going, and it is through this plan that provision will primarily be made. Having said this, the DM DPD does perform well, as discussed under the 'accessibility' heading above (and other headings), given the considerable focus on enhancements to movement / permeability, and support for locating high trip generating developments where PTAL is best. Notably, there is also a policy focused on Accessible and Safe Environments (DM 02).

APPENDIX V – HOUSING CONVERSIONS

Introduction

Chapter 6 (within 'Part 1', above) presents summary appraisal findings in relation to the following alternatives for 'housing conversions':

Option 1 - Restricted conversion area to preserve larger and family homes

Option 2 - Do not introduce restricted conversion areas.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

For each of the options, the assessment identifies / evaluates 'likely significant effects' on the baseline, drawing on the sustainability topics / objectives identified through scoping (see Part 1) as a methodological framework.

Red shading is used to indicate significant negative effects, whilst **green shading** is used to indicate significant positive effects. Every effort is made to predict effects accurately; however, this is inherently challenging given the high level nature of the scenarios. The ability to predict effects accurately is also limited by understanding of the baseline (now and in the future under a 'no plan' scenario). In light of this, there is a need to make considerable assumptions regarding how the scenarios will be implemented 'on the ground' and what the effect on particular receptors will be. Where there is a need to rely on assumptions, this is made explicit in the appraisal text.

In many instances, given reasonable assumptions, it is not possible to predict likely significant effects, but it is possible to comment on the relative merits of the alternatives in more general terms and to indicate a **rank of preference**. This is helpful, as it enables a distinction to be made between the alternatives even where it is not possible to distinguish between them in terms of 'significant effects'. Also, '=' is used to denote instances where the alternatives perform roughly on a par.

Effects are predicted taking into account the criteria presented within Regulations.¹⁷ So, for example, account is taken of the duration, frequency and reversibility of effects. Cumulative effects are also considered (i.e. where the effects of the plan may combine with the effects of other planned or on-going activity).

Finally, it is important to emphasise that the approach taken strikes a balance between the desire to ensure rigorous and systematic analysis on the one hand, and ensure **conciseness / accessibility** on the other. Where an issue, or an effect characteristic, is not referenced, the implication is that there is no point to be made that warrants a mention, given the desire to be concise. That is not to say that the issue/characteristic has been entirely overlooked as part of appraisal. Similarly, the 'significance' of effects is only discussed in instances where a clear conclusion can be reached (or there is some uncertainty). In instances where significant effects are not predicted, then significance is not discussed.

¹⁷ Schedule 1 of the Environmental Assessment of Plans and Programmes Regulations 2004

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	No notable implications.		
Education	No notable implications.		
Health	The preservation of larger and family homes will help preserve more homes for families that will have their own gardens. This should encourage children, along with adults, to spend more time outside which in the long term leads to many health benefits. On the other hand if a lack of smaller, more affordable homes means people are forced to live in sub-standard accommodation or commute long distances, this could have negative health impacts. On balance, the alternatives cannot be differentiated with any certainty.	=	
Housing	The conversion of larger homes into smaller flats can contribute to the provision of additional housing and the mix of housing in terms of smaller and larger homes; but if allowed to continue unrestrained can lead to a loss of housing mix as larger homes are lost to conversions. The cumulative effect of conversions can have an adverse impact on the character of the existing residential area in terms of the intensification of use, increased parking and introduction of communal bin stores. Without setting a restricted conversion area, it can lead to the loss of smaller family homes, for which there is an anticipated need. Notwithstanding issues related to the standard of accommodation provided following conversions and the impact on the intensification of the amenity of adjacent occupiers. Residential conversions, particularly of smaller properties require management to ensure that an appropriate balance is struck between the contribution conversions make to local housing supply, the demand for family homes with three bedrooms or more and the impact on the character of the local area. The Borough's population is set to increase by 31,234 over the period 2011-2021 indicating higher density housing is needed.		2
Community Cohesion	If it is assumed that the restricted conversion area policy would only be applied to areas with a mix of housing where larger and family housing is under significant pressure for conversion, then Option 1 would be the preferred option as it would help to protect and maintain a variety of housing types in areas where there is pressure to sub-divide the remaining family homes. This should support a more mixed community and encourage the development of relationships between from different backgrounds and communities.		2
Accessibility	No notable implications.		
Economic Growth	Assuming that there are significant pressures for the conversion of family homes in a number of areas, the failure to set a restricted conversion area is likely to result in greater adverse effects on the availability of family homes, compared to not setting a restricted area. This could affect the type of people that move into the area and thus the type of labour available for the Borough's employment sector. On the other hand, a greater availability of small homes might enable more people to afford to live in the borough and thus have a positive impact on the amount of labour available locally. On balance, the alternatives cannot be differentiated with any certainty.	=	
Skills and Training	No notable implications.		
Economic Inclusion	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	Enabling building conversions to create more dwellings and higher density living helps use land effectively and efficiently. Therefore allowing conversion to happen all over the borough would allow for higher density housing and more effective use of land.	2	★1
Flood Risk and Climate Change	While there is the potential that per capita emissions could reduce as a result of the more efficient use of space through provision of smaller dwellings within the footprint of an existing dwelling there is no evidence to ascertain this at this stage.	=	
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	The conversion of larger houses, that are often not modern, could increase the efficiency of the use of space and enhance energy efficiency (given building regulations requirements for energy efficiency). Therefore not restricting conversion to a particular area could facilitate the energy efficient conversion and retrofitting of more homes, reducing per capita energy consumption and carbon emissions.	2	★1
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p>Summary</p> <p>A key issue is the need to deliver housing that is designed to meet the requirements of the wider population and provides flexibility and choice. On average, the number of households is expected to increase but reduce in size. There is also expected to be an increase in demand for larger homes for families with two or more children. The conversion of larger homes into smaller flats can contribute to the provision of additional housing and the mix of housing (in areas where there is a monoculture of large houses); however, it can lead to a loss of housing mix in areas where there is a mix of housing types and where there is strong pressure for such conversions and family homes are not protected. The cumulative effect of conversions can also have an adverse impact on the character of existing residential areas in terms of the intensification of use and associated issues. The policy approach under Option 1 would restrict this conversion in particular areas (presumably areas where there is most pressure on the conversion/loss of family homes). This would help retain houses for larger families while still allowing conversions in other areas, helping to sustain and create a mix of housing across the borough and support mixed communities. However it would also restrict smaller dwelling sizes being created. Not setting a conversion restriction (Option 2) may have benefits for efficient use of land and climate change (reduced carbon emissions due to more efficient use of space and improved energy efficiency), but it is unlikely that these effects would be significant.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>			

APPENDIX VI – HOUSING DENSITY AND DESIGN

Introduction

Chapter 7 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for housing density and design:

Option 1- Apply London Plan density standards, but allow flexibility in applying these standards, based on local circumstances, to optimise housing delivery

Option 2 - London Plan standards applied with no flexibility for consideration of local or site circumstances.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	Historically, high density housing was designed in such a way that it inadvertently facilitated antisocial behaviour, crime and the fear of crime. However if the high density housing is designed effectively (for example through ‘Secured By Design’ principles) and provides a mix of housing this fear and level of crime should be reduced. On balance, the alternatives cannot be differentiated with any certainty.	=	
Education	The only concern with education would be to make sure that in creating higher density housing, it would be possible to provide enough additional educational capacity to support it. However, it is assumed that this would be secured through s106 or CIL contributions. On balance, the alternatives cannot be differentiated with any certainty.	=	
Health	A concern would be creating enough open space and health facilities, such as GP practices, for the residents of these high density developments. This relates to the quality of design and to the ability of the council to secure funding for supporting health, open space and community infrastructure through s106 or CIL contributions. It is assumed that the council is able to effectively address these issues through implementation. On balance, the alternatives cannot be differentiated with any certainty.	=	
Housing	The NPPF and London Plan require authorities to meet their assessed need for market and affordable housing. In some cases this might only be achieved through building higher density buildings to accommodate housing. The NPPF also states that larger developments are sometimes the best means of achieving new homes. With Haringey being a tightly built up borough, available land is restricted. However more homes could be provided on the same land area where higher densities are allowed. Allowing higher densities in some circumstances will help increase the amount of housing provided in the area, including affordable housing.	★1	2
Community Cohesion	Higher density housing has the opportunity to create a strong sense of cultural identity, belonging and well-being and develop opportunities for community involvement. High quality design and the creation of mix of housing types will be critical to achieving this.	★1	2
Accessibility	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Economic Growth	The borough has a great housing need, and if left unchecked could lead to the reduction of land available for businesses and reduce economic growth. The promotion of higher density housing can leave more land for business development and enable people looking to live and work in the borough to find homes, increasing the local labour supply.	★1	2
Skills and Training	No notable implications.		
Economic Inclusion	Higher density housing can leave more land for business development and enable people looking to live and work in the borough to find homes, increasing the local labour supply and accessibility to local jobs.	★1	2
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	Building at higher densities promotes the efficient and effective use of land because it uses less land to provide more housing for the local residents.	★1	2
Flood Risk and Climate Change	Density can have implications for surface water run-off, but high quality design including green roofs and sustainable drainage measures should be used to minimise surface water runoff. On balance, the alternatives cannot be differentiated with any certainty.		=
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	Higher density housing can mean less energy is needed to heat individual dwellings with some heat being distributed across nearby dwellings. This means that new housing, along with modern designs, can be more energy efficient.	★1	2
Waste Management	No notable implications.		
Sustainable Transport	Higher density development could facilitate the development of enhanced sustainable transport solutions that require a critical mass to support them. This would bring benefits for local residents and promote reduced car use.	★1	2
<p><u>Summary</u></p> <p>Haringey is a densely populated borough (86.2 persons per hectare; well above the London average of 52) and the population is set to increase by 31,234 over the period of 2011 to 2021. This indicates that some high density housing schemes are needed, perhaps going beyond what is recommended in the London Plan. Against this background, Option 1 is seen to perform well in terms of sustainability objectives. As well as benefits in terms housing objectives, targeted high density development in Haringey is supported in terms of ‘sustainable transport’, ‘reducing per capita carbon emissions’ and ‘increasing accessibility to local jobs’. However, there are risks around access to health care and community infrastructure more generally.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>			

APPENDIX VII – EMPLOYMENT SITES (1)

Introduction

Chapter 8 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for employment sites:

Option 1 - Requirement to maximise employment densities on sites

Option 2 - Less restrictive approach, with no specific steer for higher employment densities

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	Not maximising employment densities could lead to continued high unemployment levels, with Tottenham having some of the highest levels of unemployment in London and the UK. High unemployment areas can often lead to higher crime rates and antisocial behaviour. However, on the other hand maximising employment densities can have implications for the type of employment that is supported. On balance, the alternatives cannot be differentiated with any certainty.	=	
Education	No notable implications.		
Health	No notable implications.		
Housing	No notable implications.		
Community Cohesion	The points discussed above under the ‘crime’ heading are relevant here. There could be implications; however, on balance, the alternatives cannot be differentiated with any certainty.	=	
Accessibility	No notable implications.		
Economic Growth	There has been a decline in industrial floorspace take-up since the 1990s, the manufacturing base has also been declining, and office space buildings are mainly second hand, older buildings. 22% of businesses in Haringey cite the size of their current premises as a ‘major problem’. This could indicate the need of newer, more appropriate office space for the businesses that dominate the area, mainly falling into B1 use. Overall economic growth is more likely to occur from B1 and B2 uses as these have not declined over recent years while other uses have, therefore showing where investment would be most beneficial for the economy of the local area. By maximising employment densities (Option 1) there would be an increase in the number of jobs within the same amount of floorspace, and as such could lead to higher rates of employment than under Option 2. This is likely to lead to a significant positive effect. Option 2 would operate a more flexible approach to employment which could potentially better-respond to market dynamics, however is likely to result in fewer jobs than Option 1.	1	2
Skills and Training	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Economic Inclusion	The encouragement of new businesses is more likely to occur from Option 1 because, as noted above, economic growth is considered most likely to come from B1 development in the borough. Also a focus on B1, with higher employment densities, is likely to lead to a higher number of new jobs created which is likely to have a preferential effect in terms of economic inclusion. Option 1 is therefore likely to lead to a significant positive effect in terms of this objective.		2
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	Higher density employment results in more effective and efficient use of land with more jobs being provided from less space.		2
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	B1 uses are less likely to cause noise disturbance compared to B2 and B8 uses.		2
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p>Summary</p> <p>In an area that is constrained in terms of the availability of land for employment development and has high unemployment levels, intensifying the existing offer is an important priority to create more jobs for the growing population and to address historic local unemployment. Against this background, Option 1 is seen to perform well in terms of sustainability objectives, with significant positive effects predicted in terms of economic growth and economic inclusion. A risk is that if/when space for large floorspace uses is needed, there will not be the land available to accommodate these uses, but this is a more minor consideration given the evidence suggesting economic growth locally is considered most likely to come from B1 development.</p>			

APPENDIX VIII – EMPLOYMENT SITES (2)

Introduction

Chapter 9 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for employment sites:

- Option 1** - Allow introduction of non-employment uses (as part of mixed use schemes) in certain designated employment locations, to cross-subsidise and enable new employment development to come forward
- Option 2** - Introduction of non-employment uses within designated employment sites, with no further requirement to cross- subsidise new employment development

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	Mixed use schemes (Option 1) ensure that sites are busy throughout the day, therefore reducing risk of crime / fear of crime.		2
Education	No notable implications.		
Health	No notable implications.		
Housing	A requirement to cross-subsidise employment development could make redevelopment less of an attractive option, meaning that it is less likely that housing would come forward. However, in practice it is not thought that this will be the case in Haringey. There is also an argument to suggest that, under Option 2 (no cross subsidy) it could be the case that existing employment sites are developed more intensively for residential uses, which might not be ideal from a ‘housing’ perspective if the buildings and locations are not ideal (e.g. because of layout, design or access to services/facilities).	=	
Community Cohesion	Under Option 1 the design of any new mixed use development in an employment area would have to be carefully considered to ensure that a genuine and cohesive ‘community’ was created.	=	
Accessibility	No notable implications.		
Economic Growth	Cross subsidy (Option 1) is a means of ensuring that sites that already perform an employment function continue to do so, and it is likely that the nature of employment development that comes forward through cross-subsidy will be of a type (e.g. knowledge or creative industries) that is needed from an economic growth perspective. Significant positive effects are likely.		2
Skills and Training	No notable implications.		
Economic Inclusion	Creating mixed use development promotes flexible working patterns and good physical accessibility to local jobs in the employment location and may help to cross subsidise employment uses that create jobs and		2

Topic	Discussion	Opt 1	Opt 2
	<p>opportunities for new businesses to establish.</p> <p>Regeneration of employment areas could have negative impacts on existing businesses if increases in average rents or changes in floorspace provision force them to relocate. However this should be mitigated by the requirement in Policy DM 48 for a proportion of the provided employment floorspace to be affordable workspace in perpetuity.</p>		
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	No notable implications.		
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	<p>Requiring mixed use redevelopment of existing employment sites to cross-subsidise an enhancement of the employment offer on the site is likely to mean that the employment use is office based, leading to fewer problems around noise and disturbance.</p>	=	
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p><u>Summary</u></p> <p>Requiring mixed use redevelopment of existing employment sites to cross-subsidise an enhancement of the employment offer on the site (Option 1) will be necessary if both housing and employment growth targets are to be achieved. Office development will often come forward alongside residential development, and it should be the case that the two uses can coincide on a site without any problems, and indeed there can be benefits for local residents.</p>			

APPENDIX IX – TOWN CENTRE USES

Introduction

Chapter 10 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for town centre uses:

Option 1 - Set thresholds for percentage of A1 uses in primary and secondary frontages

Option 2 - No thresholds or different (higher/lower) thresholds for A1 uses

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	There is an issue in that a lack of active frontages can lead to increased fear of crime; however, it is not entirely clear which option would most likely lead to positive effects / would lead to greater positive effects.	=	
Education	No notable implications.		
Health	No notable implications.		
Housing	No notable implications.		
Community Cohesion	Protecting retail in town centres could help to sustain strong centres for the community, which helps to generate a greater sense of cultural identity and belonging. Conversely, setting thresholds for A1 could constrain the success/vitality of town centres (relative to a more permissive approach, Option 2) by limiting the range of outlets that are permitted. If there is greater demand for non-A1 uses than some existing A-class uses, then the policy would act to constrain the community benefits provided by town centres. On balance, the alternatives cannot be differentiated with any certainty.	=	
Accessibility	No notable implications.		
Economic Growth	Protecting A1 uses in town centres could help to sustain a vibrant local economy and local jobs. Conversely, setting thresholds for A1 could constrain the vitality of town centres (relative to a more permissive approach, Option 2) by limiting the range of outlets that are permitted. If there is greater demand for non-A1 uses than some existing A-class uses, then the policy would act to constrain the economic growth of town centres. On balance, the alternatives cannot be differentiated with any certainty.	=	
Skills and Training	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Economic Inclusion	<p>Protecting A1 uses in town centres could help to sustain a vibrant local economy and local jobs. Conversely, setting thresholds for A1 could constrain the vitality of town centres (relative to a more permissive approach, Option 2) by limiting the range of outlets that are permitted. If there is greater demand for non-A1 uses than some existing A-class uses, then the policy would act to constrain the economic growth of town centres. A more permissive approach (Option 2) might create more opportunities for new local businesses to develop.</p> <p>On balance, the alternatives cannot be differentiated with any certainty.</p>	=	
Town Centres	<p>It appears that the economic downturn is still having an impact on the retail sector, and has stunted the ability of town centres across the Borough to fulfil their role and function. Crouch End and Green lanes have the highest percentages of vacant town centre floor space, with 8.7% and 6.9% respectively. In one sense, Option 1 could improve this situation by giving priority for space in the town centres to be used for retail uses. However in the other sense, Option 1 could exacerbate the problem if retail cannot afford to set up in these town centres.</p> <p>Protecting retail in town centres could help to sustain strong and vital centres for the community. Conversely, setting thresholds for A1 could constrain the success/vitality of town centres (relative to a more permissive approach, Option 2) by limiting the range of outlets that are permitted. If there is greater demand for non-A1 uses than some existing A-class uses, then the policy would act to constrain the vitality of town centres.</p> <p>On balance, the alternatives cannot be differentiated with any certainty.</p>	=	
<p>Biodiversity; Townscape and Cultural Heritage; Open Space; Water Resources; Soil and Land Quality; Flood Risk and Climate Change; Air Quality; Noise; Energy and Carbon; Waste Management; and Sustainable Transport: No notable implications.</p>			
<p><u>Summary</u></p> <p>The town centres in Haringey act as the focus for local convenience shopping and community facilities. Given this role, they will contribute to the vitality local communities, and also help to reduce car dependency. Protecting retail in town centres (Option 1) could help to sustain strong and vital centres in the long term; but on the other hand there are arguments to suggest that setting thresholds for A1 could constrain the success/vitality of town centres (relative to a more permissive approach, Option 2). If there is greater demand for non-A1 uses than some existing A-class uses, then a restrictive policy would act to constrain the vitality of town centres, with knock-on effects. It is difficult to distinguish between the alternatives, given the changing role of town centres in society. However, it is noted that Haringey has commissioned an evidence base study which in essence says that, given the increasing population in Haringey and the likely increase in disposable income, it is likely that more retailing will be needed in the borough.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>			

APPENDIX X – NEGATIVE CLUSTERS: HOT FOOD TAKEAWAYS / BETTING SHOPS

Introduction

Chapter 11 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for negative clusters:

Option 1 - Proactively restrict negative clusters (e.g. hot food takeaways and betting shops)

Option 2 - No policy - applications assessed against other town centre use policies.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	Negative clusters are more likely to attract crime and have an increased fear of crime associated with them. Restricting these negative clusters would help reduce the levels of crime and antisocial behaviour in the long term.	★1	2
Education	No notable implications.		
Health	Hot Food / Fast Food Takeaways are often bad for people’s health, and there is clear evidence that regular use consumption of fatty food can lead to poor health (e.g. cardiovascular disease, obesity). Therefore promoting the restriction of negative clusters can help reduce the amount of fast food takeaways and in the longer term can significantly contribute to healthier lifestyles of residents. Given the prevalence of obesity in Haringey, this would likely lead to a significant positive effect in terms of health.	★1	2
Housing	No notable implications.		
Community Cohesion	Negative clusters of hot food takeaways and betting shops can often take the identity out of a community and detract from people visiting the area due to their impact on the character of an area. Option 1 would help promote a sense of cultural identity, belonging and well-being more than Option 2.	★1	2
Accessibility	It might be suggested that negative clusters impact on town centre vibrancy, and hence the potential for town centres to function as centres of service provision. However, there is no clarity on this matter.	=	
Economic Growth	There is the possibility that if negative clusters were restricted there would be a struggle to find alternative uses for the buildings. However if they were restricted this would create opportunities to diversify employment opportunities for the local area.	=	
Skills and Training	No notable implications.		
Economic Inclusion	The restriction of negative clusters could give the opportunity for the encouragement of new businesses to the area which would diversify the employment in the area and give more opportunities for the local community.	★1	2

Topic	Discussion	Opt 1	Opt 2
Town Centres	The NPPF emphasises the need to support competitive town centres, and oppose schemes that will impact town centre viability. It calls for town centres to provide a diverse retail offer and to reflect local ‘individuality’. CLG’s (2012) report ‘High streets at the heart of our communities’ notes that local policies should look to reinforce local distinctiveness and community value of town centres, and develop their social function with a view to underpinning ongoing commercial viability. All of this indicates that promoting town centres that are diverse and beneficial for the community through the economy and society are more advantageous. This is achievable through buildings being used for positive uses, compared to the town centres being a hub for negative clusters. As a result Option 1 is more beneficial for town centres.	★ 1	2
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	Negative clusters of hot food takeaways and betting shops can often adversely affect the character of an area and the townscape. Option 1 would control clusters of such uses and help to prevent negative effects, providing greater policy protection than Option 2.	★ 1	2
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	No notable implications.		
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p>Summary</p> <p>Overall, in terms of sustainability objectives, Option 1 is clearly best performing. No draw-backs are highlighted by the appraisal. Restricting negative clusters of hot food takeaways and betting shops would likely lead to significant positive benefits in terms of ‘health’, given the assumption that there would be reduced consumption of fatty foods. There would also be benefits in terms of reduced crime and antisocial behaviour, improved townscape and improved vitality in town centres.</p>			

APPENDIX XI – TALL BUILDINGS.

Introduction

Chapter 12 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for tall buildings:

- Option 1** - Detailed policy for the siting and design of tall buildings, within identified locations, taking account of site specific circumstances and supported by Haringey’s Urban Characterisation study.
- Option 2** - Less prescriptive constraints on tall buildings; relying on London Plan and Strategic Policies DPD.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	No notable implications.		
Education	No notable implications.		
Health	No notable implications.		
Housing	The Borough has population density of 86.2 persons per hectare, well above the London average (52.0). The Borough’s population is set to increase by 31,234 over the period 2011-2021. The difference between the alternatives is that Option 1 would limit tall building development to specific locations, whereas Option 2 can be seen to be a more relaxed approach. Option 2 could therefore be considered the preferred option in terms of delivery of a greater amount of housing.	2	
Community Cohesion	No notable implications.		
Accessibility	The Haringey ‘Sustainable Community Strategy 2007-2016’ looks to ensure that the Borough’s communities have easier access to open spaces, facilities and shopping areas. Ensuring accessible local services in various buildings will lead to a better environment for all Communities. However Siting and Design of Tall Buildings is not likely to have any significant effect in terms of Accessibility. On balance, the alternatives cannot be differentiated with any certainty.	=	
Economic Growth	The development of tall buildings could create additional space for business development and new employment opportunities. However indiscriminate development of tall buildings could put pressure on infrastructure including transport infrastructure, potentially undermining growth prospects. On balance, the alternatives cannot be differentiated with any certainty.	=	
Skills and Training	No notable implications.		
Economic Inclusion	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Town Centres	Not having a Prescriptive Tall buildings Siting and Design constraint will allow more wide ranging development which in turn could give a much needed lift to areas in decline. However there is a need for town centres to retain local distinctiveness and community value. It is important to ensure that a balance would be able to be struck so as to ensure the scale of new retail, commercial, culture and leisure developments within town centres reflect the size, role and function of the centres.	★ 1	2
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	The Strategically Important Landmark Viewing Corridor contributes to the overall feel of the area. Any Tall building in this respect would impede on the “London Panorama.” Proposed developments should fit within the prevailing pattern of buildings and spaces and should not detract from the panorama as a whole. In this case applying constraints, including complying with CABE/English heritage guidance, would be the better option as it would have a more-beneficial preferential effect on protecting the borough’s townscape and cultural heritage.	★ 1	2
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	Tall buildings represent an efficient use of land; however, it is not possible to meaningfully differentiate between the alternatives.	=	
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	Siting and Design of Tall Buildings is not likely to have any significant effect in terms of Energy and Carbon. It is noted that tall buildings can have very high embodied energy/carbon and that the use of lifts to access floors can increase energy consumption; however tall buildings can be designed to be very energy efficient in operation (e.g. due to high densities involved).	=	
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p><u>Summary</u></p> <p>Option 1 is best performing in terms of all objectives, other than those relating to ‘housing’. Option 1 would restrict tall buildings to particular areas, protecting the borough’s townscape and cultural heritage, while still allowing tall buildings in some areas.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>			

APPENDIX XII – VIEWS AND VISTAS

Introduction

Chapter 13 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for views and vistas:

Option 1 - Policy to minimise disturbance of identified local views and vistas

Option 2 - Only protect London Plan strategic views.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	No notable implications.		
Education	No notable implications.		
Health	No notable implications.		
Housing	The protection of identified local views in addition to Local Plan strategic views could limit the options for housing development on some sites, therefore in terms of housing delivery Option 2 (protect London Plan strategic views only) would be the preferred approach as it constrains fewer sites.	2	★1
Community Cohesion	No notable implications.		
Accessibility	No notable implications.		
Economic Growth	No notable implications.		
Skills and Training	No notable implications.		
Economic Inclusion	No notable implications.		
Town Centres	View and vistas contribute to legibility and wayfinding within town centres.	★1	2
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	Protection of identified local views and vistas in addition to London Plan strategic views (Option 1) will better protect the borough’s townscape and cultural heritage resources, as compared to only protecting London Plan strategic views. Therefore Option 1 is preferred as it will have the greater positive impact on this objective. Option 1 goes over and above the London Plan requirements and therefore would lead to a significant positive effect in terms of this objective.	★1	2
Open Space	No notable implications.		
Water	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Resources			
Soil and Land Quality	No notable implications.		
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p><u>Summary</u> A policy to minimise disturbance to identified local views and vistas in addition to London Plan strategic views (Option 1) will better protect the borough’s townscape and cultural heritage resources, as compared to only protecting London Plan strategic views (Option 2). Significant positive effects are predicted in terms of townscape/heritage objectives. However, greater protection of identified local views in addition to Local Plan strategic views could place constraints on housing delivery in some areas.</p>			

APPENDIX XIII – HERITAGE AND CONSERVATION.

Introduction

Chapter 14 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for heritage and conservation:

Option 1 - Proactive approach to designated and non-designated assets, with applicants required to demonstrate options for adaptive re-use

Option 2 - Do not apply policy to non-designated heritage assets.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	No notable implications.		
Education	No notable implications.		
Health	It is not possible to differentiate between the alternatives, although it is noted that the preservation of heritage assets can help to create a sense of place and thus improve people’s sense of wellbeing.	=	
Housing	The protection of non-designated heritage assets (Option 1) could place greater restrictions on the development of some sites, including housing developments. However this effect is anticipated to be limited.	2	★1
Community Cohesion	No notable implications.		
Accessibility	No notable implications.		
Economic Growth	The protection of non-designated heritage assets (Option 1) could place greater restrictions on the development of some sites, including sites that could contribute to economic growth. However this effect is anticipated to be limited.	2	★1
Skills and Training	No notable implications.		
Economic Inclusion	No notable implications.		
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	Option 1 would seek to protect both designated and non-designated heritage assets. Designated assets appear sufficiently protected through national policy, though some buildings are at risk, but the policy would increase protection of non-designated assets, thereby helping to preserve and enhance the value that they contribute to Haringey. Expanding the policy focus to include non-designated assets (Option 1) is likely to result in significant positive effects in terms of townscape and cultural heritage, compared to Option 2 which retains a focus solely on designated assets.	★1	2

Topic	Discussion	Opt 1	Opt 2
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land Quality	No notable implications.		
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p><u>Summary</u> A policy focus on non-designated assets in addition to designated assets (Option 1) is likely to result in significant positive effects in terms townscape and cultural heritage objectives, and it is not clear that there are any major draw-backs to this approach. There might be some negative implications for housing and economic growth, but (thinking long-term) heritage assets can help enable regeneration and create a sense of place (with positive implications for economy and community objectives).</p>			

APPENDIX XIV – CAR FREE OR CAR CAPPED DEVELOPMENTS

Introduction

Chapter 15 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for ‘car free or car capped developments’:

Option 1 - Limited or no on-site parking where there is good public transport accessibility and a Controlled Parking Zone is in place or planned

Option 2 - Parking required, in accordance with the London Plan parking standards.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	No notable implications.		
Education	No notable implications.		
Health	Creating residential developments with limited or no on-site parking could increase the usage of forms of sustainable transport, including active travel modes such as walking and cycling. This should improve health outcomes over the medium to long term through increased physical activity.	★1	2
Housing	No notable implications.		
Community Cohesion	No notable implications.		
Accessibility	Limiting parking could reduce accessibility to services and amenities, however if it is assumed that Option 1 would only be applied to sites with high PTAL levels then this should not occur, therefore it is considered that Car Free or Car Capped Developments is not likely to have any significant effect in terms of accessibility.		=
Economic Growth	No notable implications.		
Skills and Training	No notable implications.		
Economic Inclusion	No notable implications.		
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	No notable implications.		
Water Resources	No notable implications.		
Soil and Land	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Quality			
Flood Risk and Climate Change	No notable implications.		
Air Quality	The Borough suffers poor air quality primarily because of traffic congestion. The whole borough is an Air Quality Management Area, with monitoring sites located at Haringey Town Hall and Priory Park. There are concerns that ongoing development might significantly increase emissions. Minimising per capita emissions from transport by encouraging use of more sustainable transport modes would improve air quality in an area.		2
Noise	No notable implications.		
Energy and Carbon	If, under Option 1, the policy is robustly applied in the planning process (and assuming that there are significant opportunities to reduce car use) then it could result in a positive effect in terms of reducing transport-related energy consumption and per capita greenhouse gas emissions.		2
Waste Management	No notable implications.		
Sustainable Transport	Car Capped developments (Option 1) would encourage use of 'sustainable' forms of transport (walking, cycling and public transport) instead of the car. The reason for taking this approach primarily relates to infrastructure capacity (as there are concerns that the cumulative effect of numerous developments might overwhelm road capacity, which is already set to be stretched).		2
<p><u>Summary</u></p> <p>Option 1 (limited or no on-site parking where there is good public transport accessibility and a Controlled Parking Zone in place or planned) is likely to have greater positive effects in terms of encouraging sustainable transport (significant positive effect), health, air quality and climate change mitigation objectives. With large scale development planned within Haringey, an integrated approach to land use and transport planning that minimises the need to travel and encourages the most sustainable travel choices could have a notable positive effect on reducing transport-related greenhouse gas emissions per capita.</p>			

APPENDIX XV – CARBON OFFSETTING

Introduction

Chapter 16 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for allowable solutions / carbon offsetting:

Option 1 - Allowable solutions (including local carbon offsetting fund) to better enable developers to meet carbon targets

Option 2 - No allowable solutions (CO₂ reductions must be met on site); wait on further Government guidance,

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	No notable implications.		
Education	No notable implications.		
Health	A local carbon offsetting fund could be used to fund local energy solutions such as energy efficient retrofit of local authority housing and decentralised energy development, improving the condition and quality of local authority housing. Housing quality/condition is an important wider determinant of health.	★1	2
Housing	A local carbon offsetting fund could be used to fund local energy solutions such as energy efficient retrofit of local authority housing and decentralised energy development, improving the condition and quality of local authority housing. The impact could be significant if sufficient funds were captured through this mechanism, however national government may rule out such an approach in favour of a national offsetting scheme.	★1	2
Community Cohesion	No notable implications.		
Accessibility	No notable implications.		
Economic Growth	No notable implications.		
Skills and Training	No notable implications.		
Economic Inclusion	No notable implications.		
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Water Resources	No notable implications.		
Soil and Land Quality	No notable implications.		
Flood Risk and Climate Change	No notable implications.		
Air Quality	A local carbon offsetting fund could be used to fund local energy solutions such as energy efficient retrofit of local authority housing and decentralised energy development, improving the condition and quality of local authority housing. This would reduce the need for heating and thus the emissions to air from boilers.		2
Noise	No notable implications.		
Energy and Carbon	The NPPF emphasises the key role for planning in securing radical reductions in GHG, including in terms of meeting the targets set out in the Climate Change Act 2008. Plan-making should support efforts to deliver infrastructure such as low-carbon district heating network and increase energy efficiency in the built environment. A local carbon offsetting fund could be used to fund local energy solutions such as energy efficient retrofit of local authority housing and decentralised energy development, reducing carbon emissions. However national government may rule out such an approach in favour of a national offsetting scheme.		2
Waste Management	No notable implications.		
Sustainable Transport	No notable implications.		
<p><u>Summary</u></p> <p>A local carbon offsetting fund (Option 1) could be used to fund local energy solutions such as energy efficient retrofit of local authority housing and decentralised energy development, improving the condition and quality of local authority housing. The impact on housing could be significant if sufficient funds were captured through this mechanism, however national government may rule out such an approach in favour of a national offsetting scheme. Given that housing quality/condition and issues around fuel poverty are important determinants of health, Option 1 could also improve health outcomes and reduce health inequalities.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>			

APPENDIX XVI – COMMUNITY INFRASTRUCTURE

Introduction

Chapter 17 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for community infrastructure:

Option 1 - Policy to set location requirements for new / extended community facilities

Option 2 - No specific location requirements - accept facilities wherever proposed.

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	Provision of community facilities can help to reduce crime levels, particularly youth offending and anti-social behaviour, through providing opportunities for recreation and socialising. Option 1 would target community infrastructure where it is needed the most (where there are deficiencies in accessibility) which would likely have a more beneficial effect; although it is assumed that both Options would lead to a similar quantum of infrastructure being delivered in order to support growth.	★1	2
Education	Education facilities are an important type of community infrastructure and ensuring that schools are accessible can have a positive effect on educational attainment. Option 1 would target community infrastructure where it is needed the most (where there are deficiencies in accessibility) which would likely have a more beneficial effect; although it is assumed that both Options would lead to a similar quantum of infrastructure being delivered in order to support growth.	★1	2
Health	GP facilities and open space are types of community infrastructure that affect health and wellbeing and accessibility to these types of infrastructure is important to maintaining good health. As above, Option 1 would focus infrastructure where it is needed (in areas of growth of areas of deficiency) and therefore can be said to be the preferred option.	★1	2
Housing	No notable implications.		
Community Cohesion	Provision of accessible and high quality community facilities can enhance community cohesion through enabling social mixing amongst local residents. Investment in new and improved facilities in targeted locations (Option 1) is likely to have a more beneficial effect.	★1	2
Accessibility	If it can be assumed that one of the locational requirements under Option 1 is that the new/expanded infrastructure is in an accessible location, then it can be assumed that Option 1 would lead to provision of community infrastructure in more accessible locations than Option 2 which could come forward in myriad locations.	★1	2
Economic Growth	No notable implications.		

Topic	Discussion	Opt 1	Opt 2
Skills and Training	The Haringey ‘Sustainable Community Strategy 2007-2016’ sets an objective to extend training opportunities for people to improve their skills, especially in order to have access to jobs in key areas of commerce and growth. Community infrastructure can play a part in increasing educational attainment, training, workforce skills and qualifications. If under Option 1 such facilities are targeted in areas of low skills and high unemployment, Option 1 would likely lead to a more beneficial effect than Option 2.		2
Economic Inclusion	Putting new community infrastructure in the most impoverished areas of Haringey would increase attractiveness of neighbourhoods as places to live and work, and the ability of residents to take advantage of new employment opportunities. In this case Option 1 would be preferred as it would enable the developments to be put in areas of most need.		2
Town Centres	No notable implications.		
Biodiversity	No notable implications.		
Townscape and Cultural Heritage	No notable implications.		
Open Space	Open space is a type of community infrastructure. Certain parts of the borough are deficient in terms of access to open space. Targeted investment in new, expanded or enhanced open spaces in areas of deficiency could have a positive effect should it improve accessibility to open space.	=	
Water Resources	No notable implications.		
Soil and Land Quality	No notable implications.		
Flood Risk and Climate Change	No notable implications.		
Air Quality	No notable implications.		
Noise	No notable implications.		
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	If it can be assumed that one of the locational requirements under Option 1 is that the new/expanded infrastructure is in an accessible location, then it can be assumed that Option 1 would lead to provision of community infrastructure in more accessible locations than Option 2 which could come forward in myriad locations.		2
<p><u>Summary</u></p> <p>Community Infrastructure assets can help to enable regeneration and create a sense of place and improve people’s quality of life. Haringey has existing pockets of deprivation and also areas of deficiency for different types of community infrastructure, as well as new growth in the pipeline that will need supporting infrastructure. Therefore, by locating new and enhanced infrastructure in specific locations, Option 1 is more likely to benefit existing and future residents than Option 2 which could take place anywhere in the borough. No draw-backs to Option 1 have been identified.</p> <p>N.B. Neither option is predicted to lead to a significant effect, hence there is no green or red shading within this appraisal table.</p>			

APPENDIX XVII – OPEN SPACE PROVISION

Introduction

Chapter 18 (within ‘Part 1’, above) presents summary appraisal findings in relation to the following alternatives for community infrastructure:

Option 1 - Policy to allow for the reconfiguration of open space on site development proposals, where there would be no net loss of open space provision

Option 2 - Do not allow for reconfiguration of open space (maintain existing configuration).

The aim of this chapter is to present *detailed* appraisal findings.

Methodology

See discussion in Appendix V.

Appraisal findings

Topic	Discussion	Opt 1	Opt 2
Crime	Well designed and laid out open spaces can improve the quality, accessibility and safety for its users. Reconfiguration will lead to opportunities to improve design and layout.	★1	2
Education	No notable implications.		
Health	<p>The NPPF recognises the importance of Open Space to community health, stating that access to high quality open spaces can make an important contribution to the health and well-being of communities. There are localised open space deficiencies in Haringey, and it is also the case that Haringey’s population is set to increase considerably. As such, access open space is an important health issue.</p> <p>Allowing the reconfiguration of open space should enable targeted improvements to be made to the open space ‘resource’ in those parts of the borough where there are currently deficiencies (see further discussion under ‘open space’, below). It is likely that the quality of open space, in terms of it’s potential to support recreational activity and other typical open space uses, will improve.</p> <p>Reconfiguration will be undertaken with the caveat that there must be ‘no net loss’, and it is assumed that net loss will be measured on a site by site basis, as opposed to an area basis. Were net loss to be calculated on an area basis, then there might be a risk that there would be net loss in certain localities and/or a risk that the cumulative effect of reconfiguration would be open spaces become smaller and more fragmented in the long term (possibly with implications for health, if it is the case that larger open spaces are particularly important in this sense).</p> <p>Despite some uncertainties, it is appropriate to conclude that Option 1 is best performing and will lead to significant positive effects.</p>	★1	2
Housing	Enabling the reconfiguration of open space will facilitate development; however, significant effects are not predicted.	★1	2
Community Cohesion	Well designed and laid out open spaces can improve the quality, accessibility and safety for its users. Reconfiguration will lead to opportunities to improve design and layout.	★1	2
Accessibility; Economic Growth; Skills and Training; Economic Inclusion; and Town Centres: No notable			

Topic	Discussion	Opt 1	Opt 2
implications.			
Biodiversity	There is a good evidence-base - in the form of the Open Space and Biodiversity Study (2013) and work to establish the Borough's Green Grid - to enable an understanding of those sites that perform an important biodiversity role, and an understanding of those areas where there is the potential for open space enhancements to lead to biodiversity benefits. There is good potential for 'intervention' to lead to biodiversity benefits, and hence the principle of reconfiguration is supported and identified as having the potential to lead to significant positive effects to biodiversity at the Haringey scale.	★ 1	2
Townscape and Cultural Heritage	Reconfiguration might well involve a change to the existing character of the open space, which may be understood to hold a heritage value.	2	★ 1
Open Space	Open Space is protected from inappropriate development by Strategic Policy SP 13. The Council will not grant planning permission for proposals for development that would result in the loss of open space, unless an assessment has been undertaken which shows that the open space is surplus to requirement for use as an open space. A policy approach enabling reconfiguration will be applied with a view to ensuring no-net loss, and also with a view to addressing existing deficiencies and delivering targeted enhancements to quality. There is much opportunity, and hence Option 1 is supported; however, it is recognised that there might also be some risk involved with reconfiguration. The nature of open spaces will change, and there could be cumulative effects over time. It will be important to monitor implementation of the no-net-loss policy.	★ 1	2
Water Resources; Soil and Land Quality; Flood Risk and Climate Change; Air Quality; and Noise: Open space can contribute to objectives, and it might potentially be the case that reconfiguration can facilitate this. However, there is no certainty.			
Energy and Carbon	No notable implications.		
Waste Management	No notable implications.		
Sustainable Transport	Reconfiguration of open space will enable opportunities to be realised in relation to walking/cycling links.	★ 1	2
<p><u>Summary</u></p> <p>Allowing the reconfiguration of open space should enable targeted improvements to be made to the open space resource in those parts of the borough where there are currently deficiencies. It is likely that the quality of open space, in terms of it's potential to support recreational activity and other typical open space uses, will improve. This has positive implications in terms of a range of objectives, with significant positive effects predicted in terms of 'health'. It is also the case that targeted enhancements should enable biodiversity (Green Grid) opportunities to be realised, to a significant extent. A policy of enabling reconfiguration does, however, lead to some risks in terms of 'Townscape and Cultural Heritage' given that reconfiguration might well involve a change to the existing character of the open space. More generally, there is the possibility that reconfiguration of numerous open spaces could have unforeseen effects in the long term, and so monitoring will be important.</p>
