Delayed transfers of care from hospital 18+ per 100,000 population

Target: 11% reduction in the rate per 100,000 population of delayed transfer of care (delayed days)

Reporting of Delayed Transfers of Care was suspended in March 2020 and replaced with a situation report that reflects the revised hospital discharge policy. This data is currently only available nationally in an aggregated form at acute trust level.

In 2021 to 2022, performance on discharge at a HealthWB footprint will be monitored using data collected from hospital systems through the NHS Secondary Uses Service (SUS) and used to inform support offers to systems. Further details will be set out as the borough plan progresses.
