

Outcome 9
Green

% of residents physically active

Target: To increase % of residents physically active by an average of 0.4 points year on year by 2022

The rate up to May 2020 is 69% another small increase. However the rate up to November 2020 shows a small decline, this can be attributed to Covid impacts. Overall we have achieved the target despite Covid, although as the full impact of Covid feeds through this may alter.

Leisure Centres have been closed for much of the period but on opening have recorded good attendance, given the restrictions on numbers able to attend as a result of Covid restrictions applicable to leisure centres. Parks have been very busy due to Covid with many residents taking their exercise routines to these locations due to other facilities being shut. However overall Sport England data for the country and London demonstrates that those most disadvantaged have become less active during this period. Further details will be available in Q2.
